Table 67.7 shows how often price reaches a stop location. I found this by watching as price climbed to the ultimate high. If it dipped along the way and moved into the triple bottom, then I screamed like a banshee and logged it.

I found that the top of the pattern will trip a stop placed there about three-quarters of the time. That sounds low but not if you consider that price might reach the ultimate high during a throwback. Price might return to the chart pattern, but it's after it reaches the ultimate high, so it doesn't count (for the statistics, anyway).

Placing a stop in the middle or at the bottom of the pattern will trigger less often than those placed at the top of the pattern. That makes sense, of course.

Table 67.6 Volume Statistics

Description	Bull Market	Bear Market
Volume trend	61% down	62% down
Rising volume trend performance	48%	27%
Falling volume trend performance	44%	27%
Heavy breakout volume performance	47%	27%
Light breakout volume performance	41%	26%

Table 67.7 How Often Stops Hit

Description	Bull Market	Bear Market
Pattern top	76%	74%
Middle	22%	14%
Pattern bottom	4%	1%
