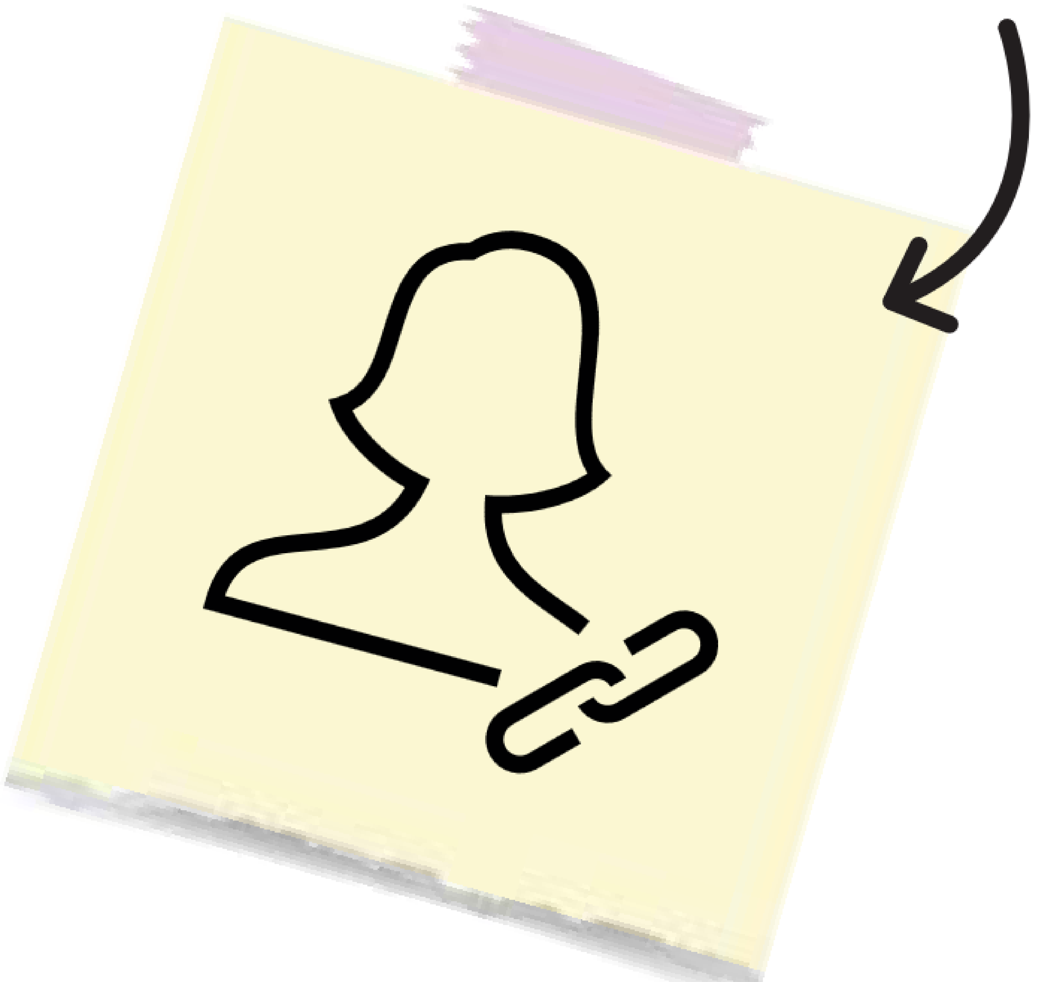
How Does the Sweep-In Facility Work?

To use it, you need to have both a bank account (like a savings or current account) and an FD in the same bank. Here's how it works in two simple steps:



Link Your Accounts:
You start by connecting your regular bank account to your FD account. This way, the bank knows where to move the money.

Set a Limit:
You decide on a balance you want to keep in your regular account for everyday expenses.

When your regular account has more money than this limit, the bank automatically moves the extra amount into the Sweep-In FD. This extra money earns the same interest rate as the FD itself. So you make more money without lifting a finger.

Let's understand it with an example.

Bank Limit	Account Balance	Deposit
₹ 50,000	₹ 40,000	₹ 20,000

Suppose you set a limit to keep INR 50,000 in your regular account for your day-to-day expenses.	Your current balance is INR 40,000.	Now, let's say you receive or deposit INR 20,000,

Making the total balance INR 60,000.

The bank will sweep in the extra INR 10,000 into your FD, where it earns the same interest as your FD.
