every important *low*. 1995 is **21** years from 1974, the starting date of Cycle wave V (and thus of wave ①), **13** years from 1982, a starting date for wave ③ *and* wave V, **8** years from 1987, the starting date of wave ⑤, and **5** years from 1990, when the extended portion of wave ⑤ began. *Each of these lows was of lesser degree*, perfectly reflecting the lessening Fibonacci time progression. All pullbacks since that time have been even smaller. The fact that this diminishing time progression so accurately reflects the market's diminishing degrees of trend change is a convincing indication that *both phenomena are reflecting a single process*, and that that process is terminating.

Also important, 1995 is related to previous "B" wave tops within Primary, Cycle and Supercycle bear markets. 1995 is **34** years from 1961, the top of an Intermediate wave (b), and **55** years from 1940, the orthodox peak of a Primary wave Ⓑ. 1996 is **144** years from 1852, the peak of a Cycle wave B. (1995 is also **89** years from 1906,
