Height and width combinations. In bear markets, patterns both tall and wide should outperform, but they place second. Short and wide wins.

In both bull and bear markets, the worst performance comes from patterns that are short and narrow, so avoid trading those.

Table 14.6 shows volume-related statistics.

Volume trend. Volume trends upward about two-thirds of the time.

Rising/Falling volume. If volume recedes over the length of the BARR bottom, performance improves. I used linear regression to find the slope of the volume trend, but sometimes you can tell by using your eyes. Split the pattern in half and determine which half has higher volume.

Table 14.5 Size Statistics

Description	**Bull Market**	**Bear Market**
Tall pattern performance	57%	36%
Short pattern performance	54%	33%
Median height as a percentage of breakout price	27.2%	39.7%
Narrow pattern performance	55%	30%
Wide pattern performance	55%	39%
Median width	100 days	92 days
Short and narrow performance	53%	28%
Short and wide performance	56%	43%
Tall and wide performance	55%	37%
Tall and narrow performance	61%	35%
