come cheap. If you own a tanning salon, your habitat is local. If you own an upscale restaurant, your habitat is county/city. If you own an Internet company, your habitat is worldwide. The larger the habitat, the greater the potential speed, or leverage, of your Fastlane.

### SWING FOR HOME RUNS, NOT SINGLES

Billionaire Mark Cuban recently wrote on his blog that it doesn't matter how many times you strike out in business because you only have to be right once, and that "once" can set you up for life. In other words, *be in the business of home runs.*

Business is like baseball. Play on a field where you can hit home runs; don't play on a field where they're prohibited! For example, if you own a clothing boutique on Main Street, you violate the Commandment of Scale because your pool of customers is drawn from the local trading area. To break scale, the business owner needs to introduce leverage in the form of replication: Open more stores, sell franchises, or sell on the Internet.

Unfortunately, most entrepreneurs engage in "singles-only" businesses. Their playing field is stunted. Their road screams "Speed Limit: 15." The home run is impossible and their habitat shriveled. If you're a massage therapist, you won't awake one day and have 10,000 patrons outside your door. There is no leverage! And if you don't have leverage in the Fastlane equation, you don't have a chance! The Commandment of Scale is like a tollbooth on the road to the Law of Effection!

### THE FASTLANE WEALTH EQUATION: DISARMED

When you violate the Commandment of Scale you disarm the Fastlane wealth equation and demote its power to Slowlane status. Recall the Fastlane wealth equation:

*Wealth = Net Profit + Asset Value*

Asset value is predicated on net profit, which is predicated by unit profit multiplied by units sold.

*Net Profit = Units Sold × Unit Profit*

If "units sold" has a ceiling, you handcuff your ability to create leverage. Without leverage, you can't create wealth exponentially. When you travel a business road incapable of scale, you render the Fastlane wealth equation impotent.

My favorite example is the guy who buys a popular sandwich franchise in his local neighborhood. This business violates the Commandment of Scale because the variables—units sold and unit profit—are implicitly limited. How many
