*Source: Bloomberg, Capitaline, Ambit Capital. Note: Portfolio at start denotes an equal allocation of Rs 100 for the stocks qualifying to be in the CCP for that year. The portfolio kicks off on 1 July every year. CAGR returns for all the portfolios since 2007 have been calculated until 30 June 2017. *Both CCP returns and Sensex returns in this table are computed using TSR, i.e. Total Shareholder Returns, which include dividends for both CCP as well as for the Sensex.*
*** 2017 iteration started on 1 July 2017 and hence its returns could not be computed.*

In the next exhibit we have analysed the performance of these seventeen historical iterations of the Coffee Can Portfolio with each portfolio lasting for up to ten years of holding period, i.e. 125 years of cumulative portfolio investments. The median portfolio return[11] (compounded and annualized) has remained robust at around 24 to 25 per cent historically, regardless of whether the investor’s holding period has been as short as three years or as long as ten years. Moreover, the Coffee Can Portfolio also delivers an extremely low level of volatility in these annualized returns for all holding periods—a necessary condition for investors to hold large exposure to equities in their net worth.
