the breakout, reverses, and drops all that way down to close below the bottom of the scallop.

Busted downward breakouts follow a reverse pattern. Price breaks out downward and drops no more than 10%, reverses, and closes above the top of the scallop to bust the chart pattern.

I would expect downward breakouts in bull markets to show higher bust rates than upward breakouts, which is what the table shows. I would also expect upward breakouts in bear markets to bust often.

Busted occurrence. I sorted the bust types into three bins: single, double, and more than two busts (triple+). Most of the time, the stock will single bust. Again, that's probably because the pattern is so tall.

Table 57.8 Performance and Failures Over Time for Bull Markets

Description	Up Breakout	Down Breakout
1990s	38%	–15%
2000s	54%	–13%
2010s	42%	–16%
Performance (above), Failures (below)		
1990s	11%	24%
2000s	10%	22%*
2010s	12%	22%*
