market. Not only that, you’re happy to pay the full asking price. It would be a silly thing to do, but let’s do a case study to see the consequences.

Average property price: £150,000

Likely deposit: £37,500

Monthly mortgage payments: £375

Average monthly rent: £675

Other expenses: £75

Monthly profit: £225

This is just a rough estimation based on average figures in today’s market. Average house prices in 2017 are around £150,000.

People in London hear this and say, “You wouldn't get a shed for that much”, while my northern friends say with a surprised voice, “Do houses really exist that are that expensive!”

I’m based in the Midlands and I’m working on averages across the country.

Twenty-five per cent is a very standard amount to put down as a deposit.

I’m working on 4 per cent interest rates on an interest-only mortgage. My broker is currently fixing them at 2.5 per cent but I’m working on 4 per cent as I want this book to stay relevant and I’m aware that these things vary over time.

The average rent is £675 per month, but do remember this will go up with time too.

Monthly expenses are minimal but will include landlord insurance of around £180 per year, possibly management costs depending on how you manage it, and possibly some small maintenance costs from time to time.
