Your 90-Day Output Number________

Here's where the rubber meets the road. Take your 90-Day Output Number and subtract it from your 90-Day Input Number.

Your 90-Day Input – Your 90-Day Output = Your 90-Day Number

_______ – _______ = _______

You're left with a cold hard number that's going to tell you a lot about the state of your finances. This is a way for you to take your financial temperature and determine your next steps. If your 90-Day Number is positive, you're making money and building wealth. Well done! If your 90-Day Number is in the red, you're in deep trouble. Listen carefully to Uncle Kevin, because things are about to get very bad if you don't. It's time to declare an official state of emergency. Downsize where you live. Move closer to where you work. Eliminate the car you can't afford. Stop taking vacations. You are on a path to financial ruin, and horrible things are going to happen to you if you don't make a change. You need this book very badly. Do not go out to dinner, and do not stop reading. The only thing you are allowed to spend money on is another copy of this book for your spouse!

Here's the good news: if you work hard to make up the deficit, you can regain your footing. It's not too late. Correct your bad spending habits now and you can still build a strong family dynasty. But you have to adjust *immediately* so that, by the time you calculate your number in another 90 days, you're back in the black.

I meet a lot of young couples on *Shark Tank* and *Dragons' Den*, many of whom are just starting out. Almost every single one of them
