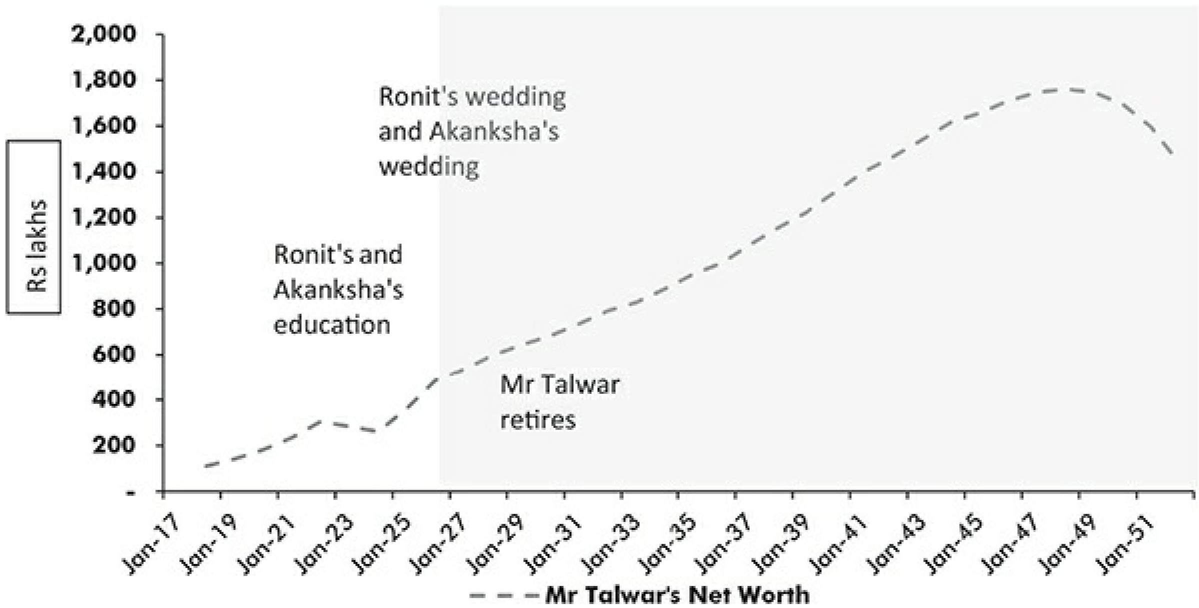
Exhibit 67: Mr Talwar's net worth going forward



Source: Ambit Capital

To achieve a 16 per cent per annum return, Nikhil makes the following asset allocation for Mr Talwar:

Equity: 80 per cent
Debt: 20 per cent
This break-up assumes pre-tax 18.8 per cent per annum return from equity and 8 per cent per annum return from debt. The blended return from these asset classes comes to 16.6 per cent per annum. With the asset allocation nailed, Nikhil proceeds to help Mr Talwar figure out what to do inside each asset class.

Equity allocation

Nikhil was clear about how Mr Talwar should participate in equity. He divided Mr Talwar's equity investments down to three buckets—large-caps, multi-caps and small-midcaps.
