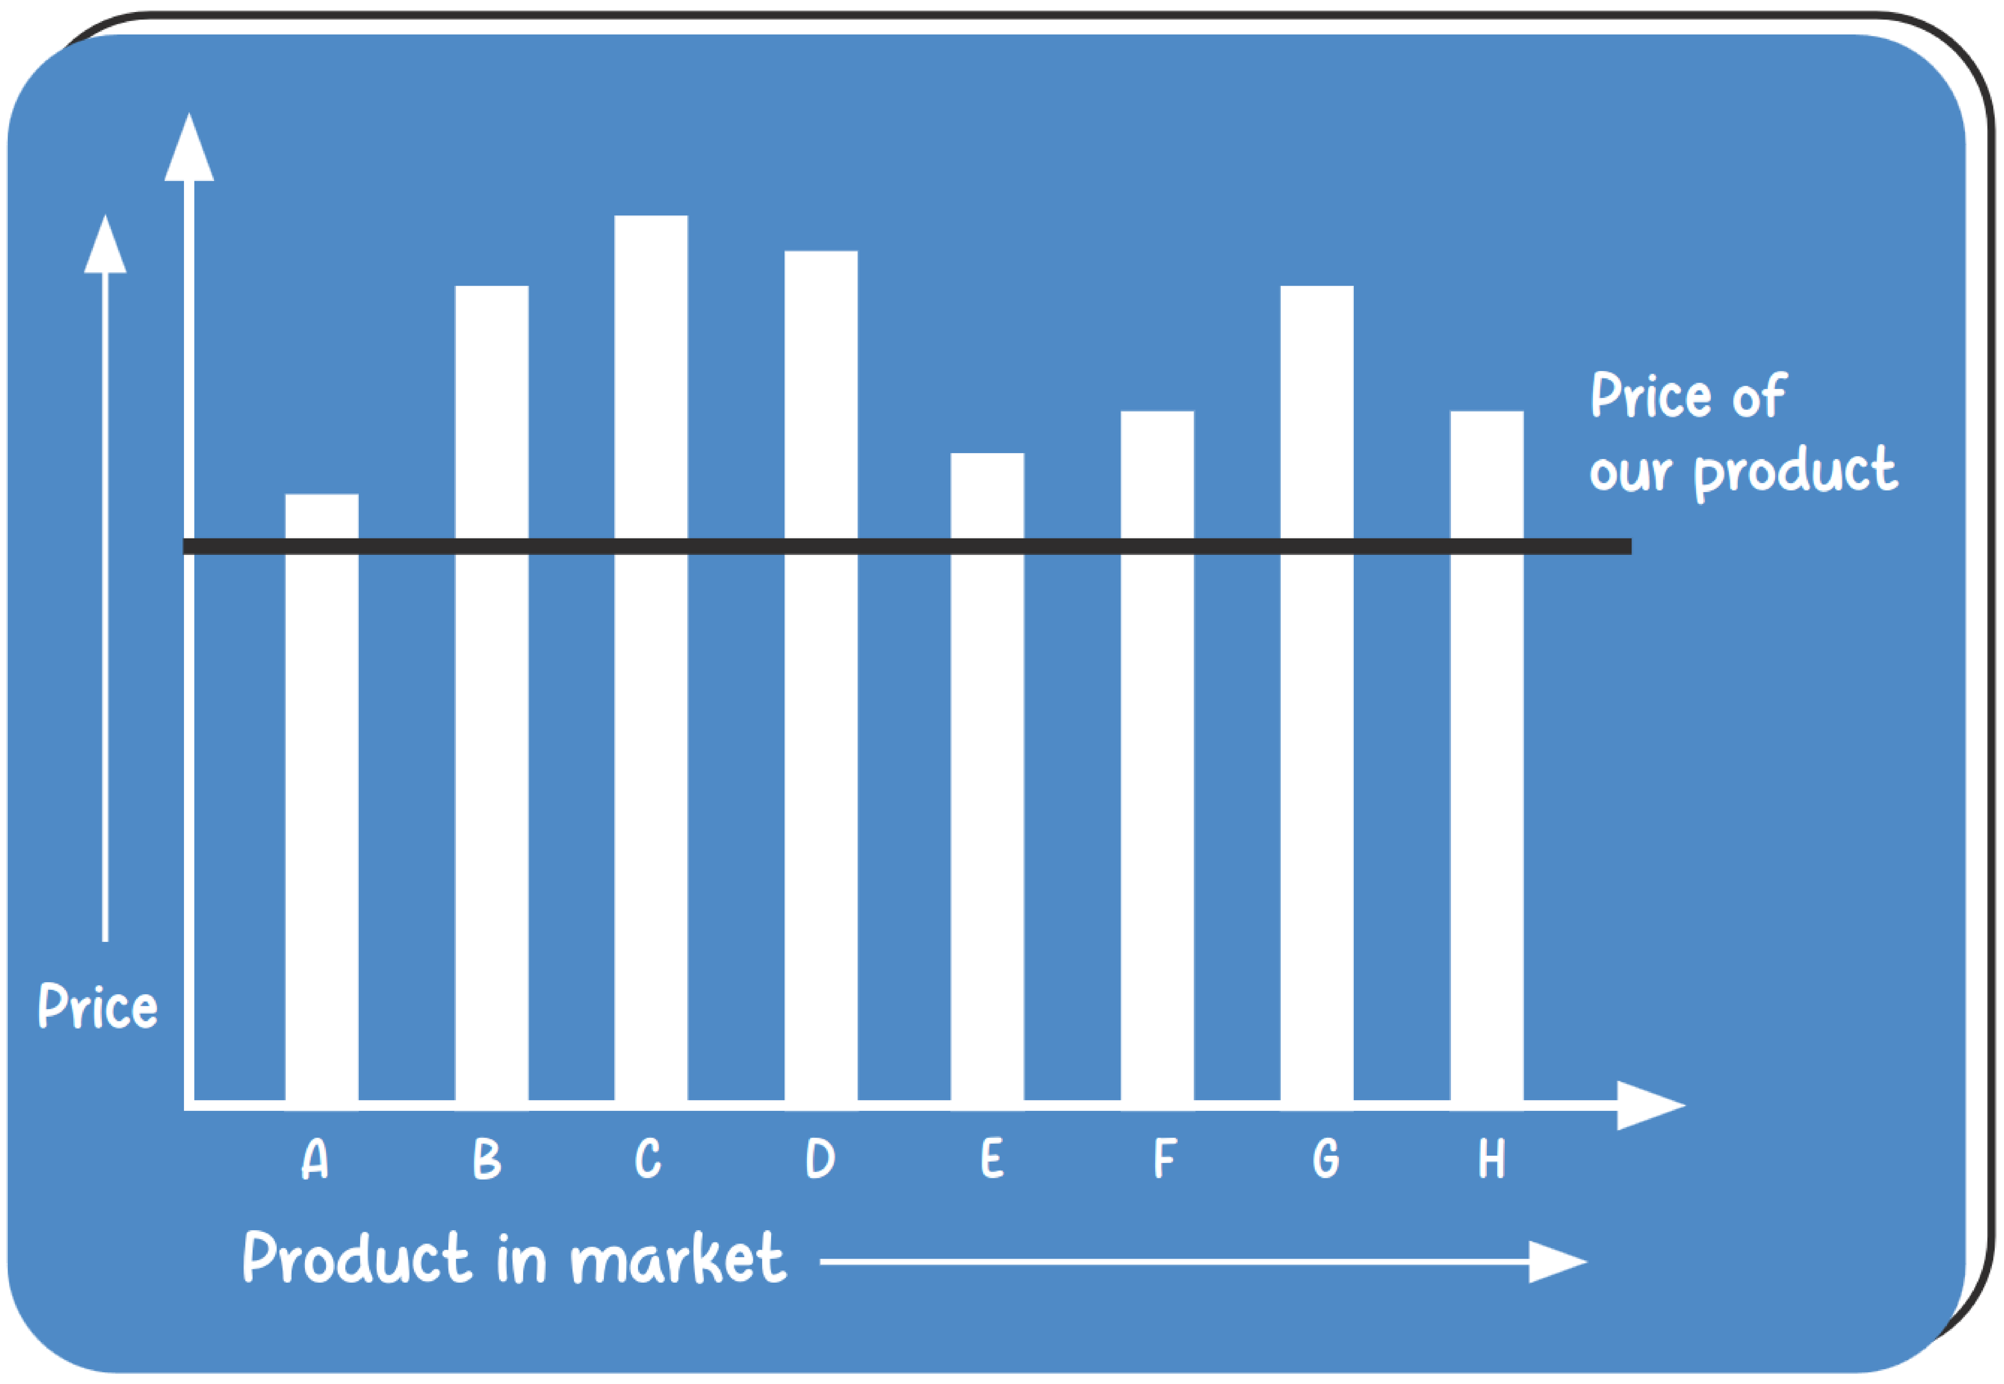
C. Market Value

Market value refers to the price that customers are willing to pay for a product or service in the current market. One strategy for determining the right price for your product is to analyse competitor's pricing.

Competitor Pricing Analysis



This understanding helps to keep your pricing strategy in line with what the market expects and remain competitive.

Below are the Pricing Strategies used in Marketing

A. Decoy Pricing

Decoy pricing is a clever marketing strategy where you offer options, with one option being better than the others, making the other options seem less attractive in comparison.

For example there are three options available.

Plan A

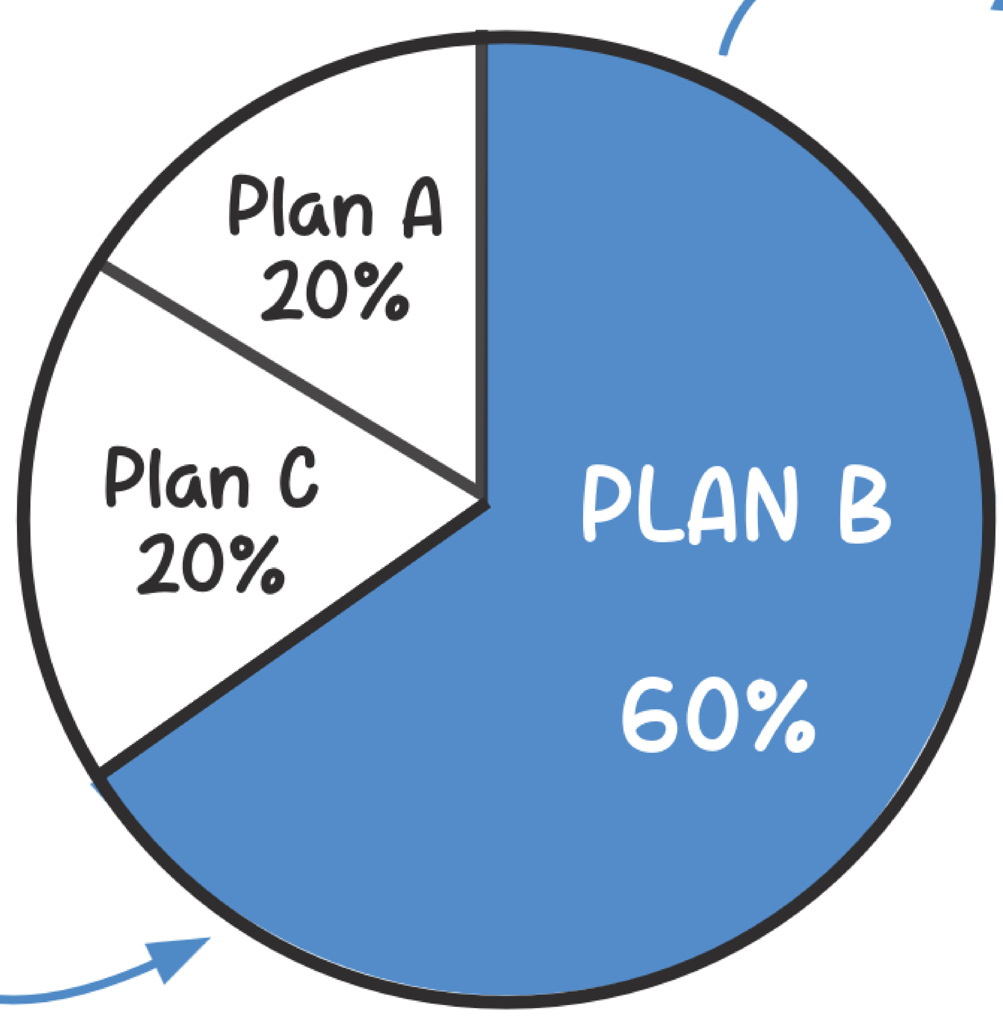
₹299: unlimited calls + 2 GB of data for 28 days

Plan B

₹399: unlimited calls and data for 28 days

Plan C

₹599: unlimited calls and data for 52 days



Customers choose plan B due to no limit on data and calls for 28 days. 399 seems to be the best value because it offers unlimited calls and data for 28 days compared to the other two options.

This offer encourages customers to choose those options, even if it might be more than they initially planned to spend. This tactic can influence customer decisions.
