**Is Time Segmentation a Superior Investing Strategy?**

Determining whether time segmentation is a superior investing strategy to total-returns investing is controversial, though the general consensus is that there is no reason to believe that time segmentation is a uniquely better way to invest. To be a better investment strategy, it would need to be able to reduce sequence risk in a unique way relative to a total-returns portfolio with the same asset allocation. The basic controversy is around asset allocation and how to compare two different strategies. A time segmentation strategy justifies a dynamic asset allocation with a potentially higher average stock
