the ultimate consumer—the deluded poor. You can pass a law that will make rich men poor, but you cannot enact one that will make poor men rich. But they tell you that the rich, having suffered less than the poor in the past, must suffer more in the future! Reduce wages, but don't touch mine! Sell your goods cheaper, but don't ask me to come down in my prices! I am playing safe by hoarding my money, but you must spend more than ever, to make work for the unemployed.

The behavior of the stock market of late months has had only a post-mortem interest for millions of once-courageous Americans. The delusion of the bulls in 1928 and 1929, costly as it proved, was not so destructive to society as the later delusion that bargains are not bargains because of the possibility that prices may go still lower. Not one American in a million, as this article is being written, asks himself the intelligent trader's question: *How much can I lose?* He does not wish to lose at all, and experience proves that it is the inveterate sure-thing player who eventually buys gold bricks.

You can pass a law that will make rich men poor, but you cannot enact one that will make poor men rich.

When the Dollar Departs

I propose to tell men who were never rich, except for a brief moment on paper, how men who were always rich have ceased to be rich. Men of experience, ability, courage and capital, who never had to take heavy losses before, have taken more than their share of the universal wallop. Read on; for now it may be told.
