
Figure 7.6 ■ Bitcoin’s performance compared to major U.S. stock indices since its November 2013 peak Data sourced from Bloomberg and CoinDesk

An investor who purchased bitcoin at its peak on November 29, 2013, rather than one of the FANG stocks would have suffered an even more drastic differential in returns. As shown in Figure 7.7, the capital appreciation provided by Facebook, Amazon, Netflix, and Google would have been 3-fold, 2.3-fold, 2.9-fold, and 1.8-fold that of bitcoin during this time period. While innovative investors who had gotten into bitcoin soon after Facebook IPO’d would have been rewarded for their decision, if they had waited a year and a half they would have been dealing with a vastly different story.
