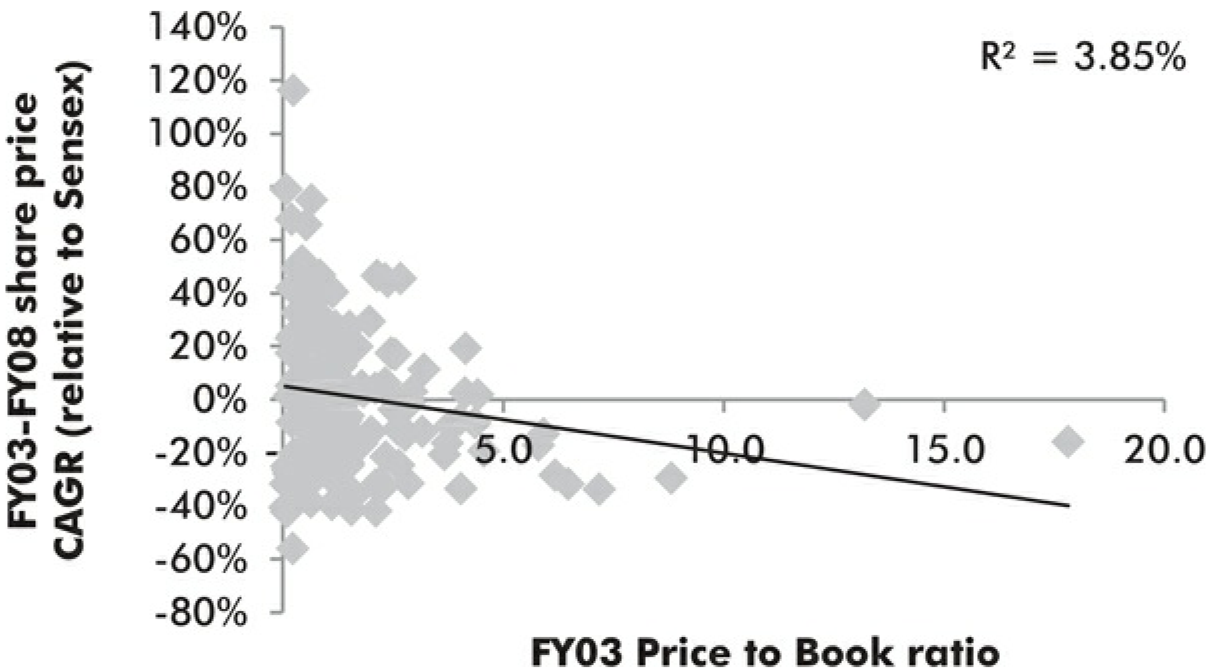
Exhibit 164: No correlation of five-year returns with starting P/B multiple



Source: Ambit Capital
Note: Returns here are stock returns relative to the Sensex.

Scenario 3 (cross-cyclical phase): Lastly, we examine returns over an extended period of ten years (FY07–17). The results obtained are largely similar to those over shorter time frames, i.e. there is no evidence to suggest that buying stocks which look cheap on P/E or P/B leads to superior investment returns in the long run.
