> Millennials, assisted by a cadre of impressively socially awkward Bitcoin startup VC types, are piling intellectual and financial capital into this whole cryptocurrency idea—Bitcoin, Ethereum, all of it. What “e-” in front of any noun did for techie investor excitement in the 1990s, “crypto” and “blockchain” seems to be doing today.[7]

Are millennials turning to bitcoin and cryptoassets for their investments? Is a Vanguard fund or a small investment in Apple any better? Whereas the Vanguard fund has a minimum investment amount and buying an equity will require a commission, millennials see cryptoasset markets as a way to begin investing with a modest amount of money and in small increments, which is often not possible with stocks or funds.[8]

The important point is that at least they’re doing something to invest their funds and build the groundwork for a healthy financial future. We have seen firsthand millennials who have learned about investing from buying cryptoassets and have implemented investing approaches, such as taking profits at certain price points, seeking diversification into multiple assets, and so on. A local bitcoin meetup will include not only computer nerds discussing hash rates and the virtues of proof-of-work vs. proof-of-stake, but also deep and financially sound discussions among participants of various ages about recent cryptoasset investments.

GOLDILOCKS YEARS OF CRYPTOASSETS?

We may be at a point where millennials recognize the opportunity that cryptoassets provide, while most of Wall
