US$21 million. This is investor money, after having paid you quite a bit in fees over these years. And how much have you been paid in the first five years? All in all, about US$3.5 million have ended up in your own pocket.

If you still wonder why you would want to trade other people's money rather than your own, there's your answer. You could have traded your own money, taking all the risk and all the upside, but this way you made millions while taking very little risk, all while also making a great return for your investors. Everyone's happy.

Tables 6.21 and 6.22 show the initial allocation for 2007, and, as you see, long equities is the main theme. We're fairly balanced on most other sectors except for the non-agricultural commodities, where we are short.

TABLE 6.21 Initial portfolio 2007

Market	Direction	Sector
Sugar No. 11	Short	Agriculture
Lean Hogs	Short	Agriculture
Soybean Oil	Long	Agriculture
Soybean	Long	Agriculture
Canola	Long	Agriculture
Cocoa	Long	Agriculture
