friend and he wanted a piece of it. So I sold the piece to him and then bought the land. I kept the remaining land as mine for free. Moral of the story: Buy the pie and cut it in pieces. Most people look for what they can afford, so they look too small. They buy only a piece of the pie, so they end up paying more for less.

Small thinkers don't get the big breaks. If you want to get richer, think bigger first.

Retailers love giving volume discounts, simply because most business people love big spenders. So even if you're small, you can always think big. When my company was in the market for computers, I called several friends and asked them if they were ready to buy also. We then went to different dealers and negotiated a great deal because we wanted to buy so many. I have done the same with stocks. Small people remain small because they think small; act alone, or don't act all.

• Learn from history. All the big companies on the stock exchange started out as small companies. Colonel Sanders did not get rich until after he lost everything in his 60s. Bill Gates was one of the richest men in the world before he was 30.

• Action always beats inaction.

These are just a few of the things I have done and continue to do to recognize opportunities. The important words being “done” and “do”. As repeated many times throughout the book, you must take action before you can receive the financial rewards. Act now!

EPILOGUE

How To Pay for a Child's College Education for $7000

As the book draws to a close and approaches publication, I would like to share a final thought with you. The main reason I wrote this book was to share insights into how increased financial intelligence can be used to solve many of life's common problems. Without financial training, we all too often use the standard formulas to get through life, such as to work hard, save, borrow and pay excessive taxes. Today we need better information.

I use the following story as a final example of a financial problem that confronts many young families today. How do you afford a good education for your children and provide for your own retirement? It is an example of using financial intelligence instead of hard work to achieve the same goal.

A friend of mine was griping one day about how hard it was to save money for his four children's college education. He was putting $300 away in a mutual fund each month and had so far accumulated about $12,000. He estimated he needed $400,000 to get four children through college. He had 12 years to save for it, since his oldest child was then 6
