

We have seen that the traditional common-stock investor sought to place himself as nearly as possible in the position of an investor in a bond or a preferred stock. He aimed primarily at a steady income return, which in general would be both somewhat larger and somewhat less certain than that provided by good senior securities. Excellent illustrations of the effect of this attitude upon the price of common stocks are afforded by the records of the earnings, dividends and annual price variations of American Sugar Refining between 1907 and 1913 and of Atchison, Topeka, and Santa Fe Railway between 1916 and 1925 presented herewith.
