

- Yahoo Finance
- FRED (Federal Reserve Economic Data)
- World Bank
- OECD (Organisation for Economic Co-operation and Development)
- Eurostat

Here's a basic example using `pandas-datareader`:

```
1. # Install the library (you only need to do this once)
2. # pip install pandas-datareader
3.
4. # Import the library
5. import pandas_datareader as pdr
6. import datetime as dt
7.
8. # Define date range
9. start_date = dt.datetime(2023, 1, 1)
10. end_date = dt.datetime(2023, 7, 1)
11.
12. # Get Tesla stock data from Yahoo Finance
13. tesla_data = pdr.data.get_data_yahoo("TSLA", start=start_date, end=end_date)
14.
15. # Display the first few rows
16. print(tesla_data.head())
17.
```

This code accomplishes a similar task to our `yfinance` example but demonstrates the slightly different syntax of `pandas-datareader`.

Alternative Data Sources: Beyond the Basics

While `yfinance` and `pandas-datareader` provide excellent starting points, serious algorithmic traders often need additional data sources. Here are a few worth exploring as you advance:

-
