

```

1. import matplotlib.pyplot as plt
2.
3. # Create a line chart of Apple's adjusted close price
4. plt.figure(figsize=(12, 6))
5. plt.plot(apple['Adj Close'], color='blue')
6. plt.title('Apple Stock Price (2022)')
7. plt.ylabel('Price ($)')
8. plt.xlabel('Date')
9. plt.grid(True)
10. plt.show()
11.

```

This simple chart immediately shows the overall trend, major support/resistance levels, and key turning points in Apple's price. It answers questions like:

- What was the overall trend for the year?
- When did major price movements occur?
- Are there any obvious cycles or patterns?

?? **Pro Tip:** Professional traders often add volume as a second panel below the price chart. Volume confirms price movements—strong trends typically show increasing volume, while price moves on low volume are often less reliable. To create this two-panel view in matplotlib, use `plt.subplot()` to create
