

- The overall volatility (width of the distribution)

For most stocks, you'll see a bell-shaped curve centered slightly above zero, with a few outliers on both sides. Departures from this pattern can signal trading opportunities or risks.

Bar Charts: Comparing Values

Bar charts excel at comparing values across categories. In trading, they're useful for comparing performance across different stocks, sectors, or time periods.

```
1. # Download data for multiple tech stocks
2. tech_stocks = yf.download('AAPL MSFT GOOGL AMZN META',
3.                             start='2022-01-01',
4.                             end='2023-01-01')['Adj Close']
5.
6. # Calculate annual returns
7. annual_returns = tech_stocks.pct_change().dropna().mean() * 252 * 100
8.
9. # Create a bar chart
10. plt.figure(figsize=(12, 6))
11. plt.bar(annual_returns.index, annual_returns, color='blue', alpha=0.7)
12. plt.title('Estimated Annual Returns of Tech Stocks (2022)')
13. plt.xlabel('Stock')
14. plt.ylabel('Annual Return (%)')
15. plt.grid(True, axis='y')
16. plt.show()
17.
```
