

```
29. plt.legend(loc='best')
30. plt.grid(True)
31.
32. plt.tight_layout()
33. plt.show()
34.
```

This visualization separates Apple's price movement into:

- The underlying trend (are prices generally rising or falling?)
- Seasonal patterns (are there regular cycles, perhaps related to quarterly earnings or annual product launches?)
- Residual movements (the "random" component that remains after accounting for trend and seasonality)
