

Project 11: Multi-Asset Market Analysis Dashboard

Objective: Create a comprehensive visual analytics dashboard that provides insights into the relationships, patterns, and statistical properties of multiple financial assets.

Requirements:

1. Select a portfolio of at least 5 different assets:
 - Include stocks from different sectors
 - Add at least one market index (e.g., S&P 500)
 - Include at least one alternative asset (cryptocurrency, commodity, or forex pair)
2. Collect at least 2 years of daily price data for all selected assets.
3. Create a dashboard with the following visualizations:
 - Line charts showing price evolution with important events labeled
 - Histograms comparing return distributions across all assets
 - Box plots displaying the statistical properties of returns
 - A correlation heatmap showing relationships between assets
 - Scatter plots with trend lines for at least two pairs of assets
 - Volatility comparison charts using rolling standard deviation
