

Chapter 2: Setting Up Your Python Environment

The Carpenter's Workshop: Why Your Setup Matters

On January 13, 2022, the cryptocurrency exchange [Crypto.com](https://crypto.com) suffered a massive security breach. Hackers stole approximately \$30 million in Bitcoin and Ethereum from 483 users. The company's swift response helped prevent further damage, but the incident sent shockwaves through the financial technology world. During the post-mortem analysis, cybersecurity experts discovered that part of the vulnerability stemmed from outdated software libraries in the exchange's infrastructure.

This high-profile case illustrates an often-overlooked truth: in the world of financial technology and algorithmic trading,
