

Installation:

1. pip install pandas
- 2.

Simple example:

```
1. import pandas as pd
2.
3. # Create a simple DataFrame of stock data
4. data = {
5.     'Date': ['2023-01-01', '2023-01-02', '2023-01-03', '2023-01-04'],
6.     'Price': [100, 102, 104, 103],
7.     'Volume': [5000, 6000, 7500, 4300]
8. }
9.
10. df = pd.DataFrame(data)
11.
12. # Display the data
13. print(df)
14.
```

Matplotlib: Visualizing Financial Data

Matplotlib is the standard library for creating visualizations in Python. For a trader, visualizing data isn't just about creating pretty charts—it's about gaining insights that might not be obvious from numbers alone.

Real-world application: JPMorgan's risk management team uses Matplotlib to create daily visualization dashboards of their trading positions and risk exposures.

Installation:

1. pip install matplotlib

Simple example:

```
1. import matplotlib.pyplot as plt
2. import numpy as np
3.
4. # Generate some sample stock price data
5. days = 100
6. price = 100
```
