

2.

Check for system dependencies: Some packages require additional system libraries

3.

Try Conda: If using pip fails, Conda often handles dependencies better

IDE Not Recognizing Python

If your IDE can't find your Python installation:

1.

Configure the interpreter path: In your IDE settings, specify the path to your Python executable

2.

Restart the IDE: Changes sometimes require a restart

3.

Check extension settings: Ensure language extensions are properly configured

Virtual Environment Activation Issues

If you have trouble activating virtual environments:

1.

Check execution policies (Windows): You might need to adjust PowerShell execution policies

2.

Use the correct path: Ensure you're using the right path to the activation script

3.

Try an alternative terminal: Some terminals handle activation better than others

Conclusion: Your Foundation Is Set

In this chapter, we've built a solid foundation for your algorithmic trading journey. You've installed Python, set up a development environment,
