

Q

Quadratic programming approach, 306–308

Quant managers, 27–28

Quantitative algorithmic techniques, 38–39

Quantitative analysts, 27

Quantitative portfolio management techniques, 361

acquisition costs, 377–380

alpha

- capture program, 388–394
- curves, 393–394
- for managers, 394

broker-dealer cost estimates, 370*t*

liquidation costs, 377–380

MI factor scores, 384–388

- analysis, 386–388
- current state of, 386
- shares, derivation of, 384–386

portfolio construction, models of, 363–367

- vendor market impact models, current state of, 364–367

pre-trade modeling approach, 367–374

- applications, 372–374
- cost estimation process, 368–371
- screening techniques, 380–384

Quantitative portfolio managers, 25–26, 339

Quantitative trading/statistical arbitrage, 41

Questioning, 164, 166

QWest Communications, 444

R

R2000 index cost analysis, 203–204, 211, 382*f*

Random walk

- with market impact, 144–146
- with price drift, 143–144

Realized volatility, 193

Real-time cost index, 403–415

- back-testing, 408–410
- market impact simulation, 410–412

Real-time trading costs, 405–406

Rebate/liquidity trading, 41–43

Rebates, 23, 90

Recent growth in algorithmic trading, 11–15

Reflect future views

- in portfolio optimization, 333

Regression analysis, 161

Relative performance measure (RPM), 109–110

Re-optimization, 319

Research function, 26–27

Research sales. *See* Equity sales

Residual risk curve, 320–321

Residual schedule exponential, 309–310

Risk arbitrage. *See* Merger arbitrage

Risk aversion parameter, 19

Risk bid. *See* Principal bid

Risk factor model, 227*t*

Risk management, by portfolio managers, 333

Risk minimization with cost constraint, 280

Risk of portfolio, 355–359

Riskless arbitrage, 432–433

Risk-management constraint, 304–305

“Robo” trading, 39

Root mean square error (RMSE), 209–210, 447*t*

Root mean z-score squared error (RMZSE), 209–210

Rule based trading, 38

S

Sales function, 27–28

Scalping, types of, 440

Screening techniques, for portfolio management, 380–384

Self-financing constraint, 304

Sell order, 184–185

Sell-initiated trades, 177

Sell-side trading desks, 1–2

Sensitivity analysis, 181–186

Sharpe ratio, 338, 448*t*

Short-term cost index, 398–399

Sign test, 117–118

Single index model, 227–228

Single stock algorithms, 17

Single stock/block desk. *See* Cash trading desk

Singular value decomposition, 231

Small cap (SC) stocks, 62, 167, 185

Small cap index, 398–399

Small sample size, 126

Smart order router (SOR), 35–37

SP500 index, 397

Special event days, 73–76

- before/after holidays, 76
- company earnings, 75

early close, 76

FOMC days, 75

index change, 75–76

month end, 76

quarter end, 76

triple witching, 75

Spread cost analysis, 51*t*

Spreads, 67–68, 90

Statistical analysis, 187

Statistical arbitrage, 432–436

Statistical factor models, 231–234

Statistical performance measures, 447–448

Stock return, expected, 355

Stock specific error analysis, 189–191

Stock specific risk, 141, 226–227

Stock volatility, forecasting, 202–206

- volatility models, 202–206

Stylized facts, in econometrics, 432

Suboptimal Markowitzian portfolio, 351

Supplemental liquidity providers (SLPs), 59–60

Supply-demand equilibrium, 132–135

Systematic risk component, 226–227

T

Tabb Group, 11–12

Taker-maker model, 56

Target cost tactic, 288–289

Taxes, 89–90

Temporary decay formulation, 137–138

Temporary impact decay function, 135–137

Temporary market impact, 129–130

- cost, 149
- example, 130

Theil’s inequality coefficient (Theil-U), 447, 447*t*

Time and sales data. *See* Actual tic data

Time weighted average price (TWAP), 17

Time-based adaptation tactic, 32

Timing risk, 92, 243–248, 302

Total market volume, 177

Trade cost, 401

- optimization, 53*t*

Trade schedule exponential, 308–309

Trade schedule optimization, 297–298

Trade size, 7–9, 8*f*

- average, 8*f*
- by market, 8*f*
- volume and, 9*f*
- distribution of, 9*f*
