The analysis evaluated trading patterns during four different periods: full day, intraday, opening auction, and closing auction. These periods are defined as:

Full Day: the full trading day from 9:30 a.m. to 4:00 p.m. and includes opening and closing auction volume.

Intraday: the full trading day from 9:30 a.m. to 4:00 p.m. and excludes opening and closing auction volumes. This consists of the volume and trading patterns that are actionably by traders and algorithms.

Opening Auction: volume that trades in the opening auction volume on the day.

Closing Auction: volume that trades in the closing auction volume on the day.
