

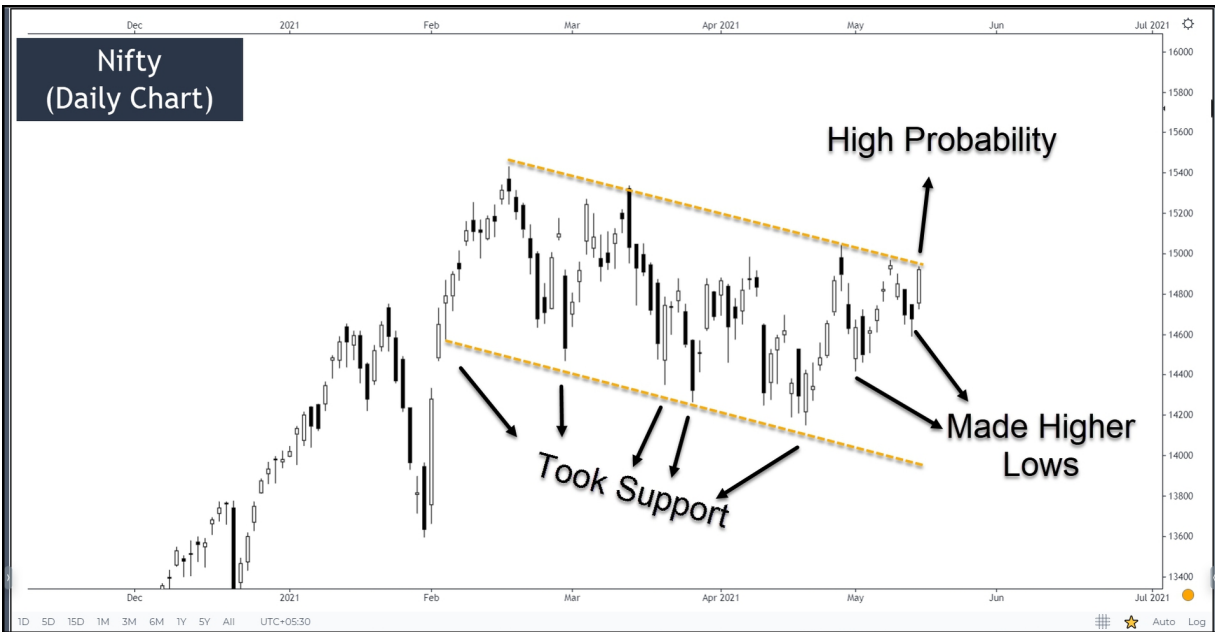

Image 9.1 – Nifty Daily Chart

The above image shows the Nifty daily chart as of 17-May-2021.

It is clearly going ahead in a channel. However, it made a last lower low on 22-Apr-2021, and after that, it made only Higher Lows (HL).

On 17-May-2021, it displayed the strength of bulls, and the price closed very close to the resistance trend line.

So, there is a high probability of Nifty showing a breakout on the next day.

Assume after seeing this setup; you are ready to take a long trade when the market opens tomorrow, in the futures segment.
