

Intraday Trading can be as competitive and aggressive as any T-20 game. The stakes are high in both the games, and what goes into winning the game is a lot more than what you see on your mobile or TV screen!

Gary Kirsten, who coached India to the 2011 ICC World Cup title, said -

*"We moved away from focusing on individual success and more around what we wanted to achieve as a team,"*

Many players disclosed that Gary used to spend over 90% of the time analyzing the video footage, in-game probabilities, and strategies.

Both Gary and MS used to explain the strategies one day before the game. When the players finally step on the field, they were merely executing the pre-designed strategies.

Similarly, traders should plan their intraday strategies before the game begins. If you decide to design a day trading strategy in a live market, then you're setting yourself up for massive failure.

The cricket coach and captain discuss with each other, and they create a plan. If we win the toss, are we to bat first or bowl first. Are we aiming to score aggressively in the first power play or retain wickets as much as possible, and score more runs in the last few overs?

Intraday traders should prepare their plan with similar strategies. How many trades am I taking on a trading day? What is the % risk per trade? What should be the maximum % risk on any trading day? When to break these rules?

Numbers are significant for day traders. A day trader knows that his options buying trading system has only a 30% success ratio. Then his failure ratio is 70%, and there is a high probability that he will get many successive failed trades.

Let's say he is emotionally comfortable losing only up to 30% of his trading capital. The back testing report says 10 successive failed trades occurred in the past in his options buying system. Then he should not risk more than 3% on each trade.

In a few T-20 games, people blame cricket umpires and say their mistake cost them the game. But the truth is brutal – the umpires never cost anyone the game. Very rarely, they might have made a mistake, but it is the team
