

## CHAPTER 10

### 6 FREE Tools For Intraday Trading

**Disclaimer** – At the time of writing this book, neither my firm nor I are an affiliate partner of any companies whose products are mentioned in this chapter. Besides, I have not received any financial benefits from any of the below companies for referencing them here. I use many products for my trading activities, and I find these tools are highly beneficial for day traders.

#### **Tool #1 Gocharting**

It is the first company to build web-based Market Profile (TPO – Time Price Opportunity) charts. Market Profile is an advanced trading concept that helps intraday traders.

Earlier traders had to download the software to access the TPO charts. But it is not a convenient option for working professionals as they can't install outside software in their systems.

Gocharting solved this problem by providing free market profile charts (web version) to all the traders.
