

So, she decides to deploy the iron condor strategy. However, she is not aware of the margin required to execute the plan, P&L details, and is unable to decide whether to opt for the trade.

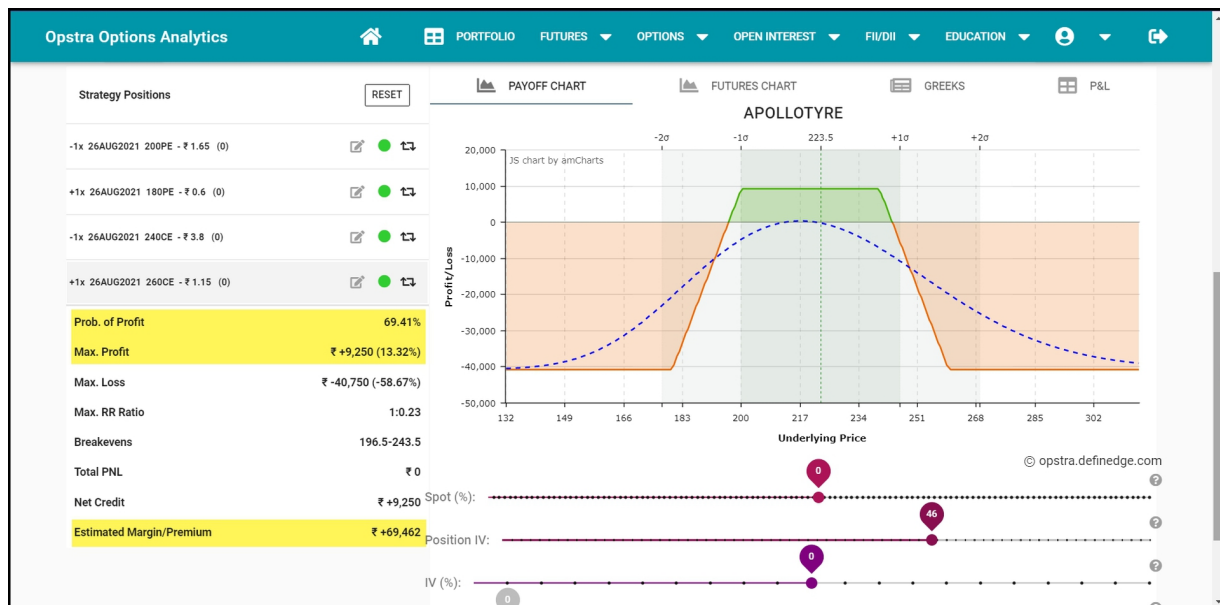

Image 10.4 – P&L Chart in Iron Condor Strategy

The above chart from Opstra Define Edge shows the P&L chart, margin required, success probability, and many more details related to this strategy. After seeing all these details, a trader can decide to execute the strategy or make alterations before implementing the plan.

Zerodha Sensibull also provides a similar feature (along with many more features). However, it charges a small fee for the traders to use its platform. The advantage in Sensibull for a trader is that not only can one see these P&L charts but also execute these strategies in one click (after connecting the broker terminal).

Tool #3 Trading View

Day traders have to access live future charts of indices/stocks to identify their trade setups and manage their trades.
