

fails to score 20 runs, you will lose 1000 rupees (assuming you bet 1000 rupees).

Statement 2 – Ishant Sharma will score a minimum of 20 runs. The bet is for **1:5**. It means, if he scores 20+ runs, you will win 5000 rupees, and if he fails to score 20 runs, you will lose 1000 rupees (assuming you bet 1000 rupees).

Any person with some cricketing knowledge will pick statement-1 as analysis and statement-2 as gambling.

Because Virat Kohli's batting average is 52, 59, 53, and 38 in Test, ODI, T20, and IPL, respectively (at the time of writing this book). So, there is a higher probability of succeeding if you bet for 20+ runs with 1:2 risk-reward.

But Ishant Sharma's batting average is 8.2, 4.8, 8, and 9.2 in Test, ODI, T20, and IPL, respectively (at the time of writing this book). Only once, he has scored a 50 in a test match. So, there is a higher probability of losing money if you bet for 20+ runs although there is a 1:5 risk reward.

Successful intraday trading is all about finding a solid trading pattern (Virat Kohli in Trading) and execute it with complete risk management.

Even Virat Kohli gets out for a '0' sometimes, but if your bet is less than 2% of the total capital, you will always emerge a winner.

Similarly, if you restrict the total loss below 2% on any intraday trade and have a solid intraday setup, and if you execute it consistently, then nobody can stop you from making money in intraday trading!

4 Pillars to Achieve Massive Success in Day Trading

Any venture that does not incorporate preparation steps before starting its operations often tends to fail. A pilot has to prep before flying the airplane. An actor also has to participate in a few rehearsals before acting in front of the camera.

Unfortunately, many people attend a course on day trading on a weekend. They wake up Monday morning with high energy, take a cup of coffee, and start to trade. They trade as if the market will end on that day itself. There is
