

Image 2.1 – Volume Spike in HDFC Bank

The above chart is a daily chart of HDFC Bank. On 13th March, the price broke the resistance and closed near the day's high. The most crucial point to note is that it traded over 3-4 times the average volume on this day. It indicates strong buyers accumulated the stock, and there is a high probability of the price going upside further.

So, intraday traders can use volume shockers' information to shortlist the stocks. If the stock satisfies their criteria, they can monitor the stock the next day for trading.

Below are some of the valuable resources to find volume shockers:

For the Indian Markets
