

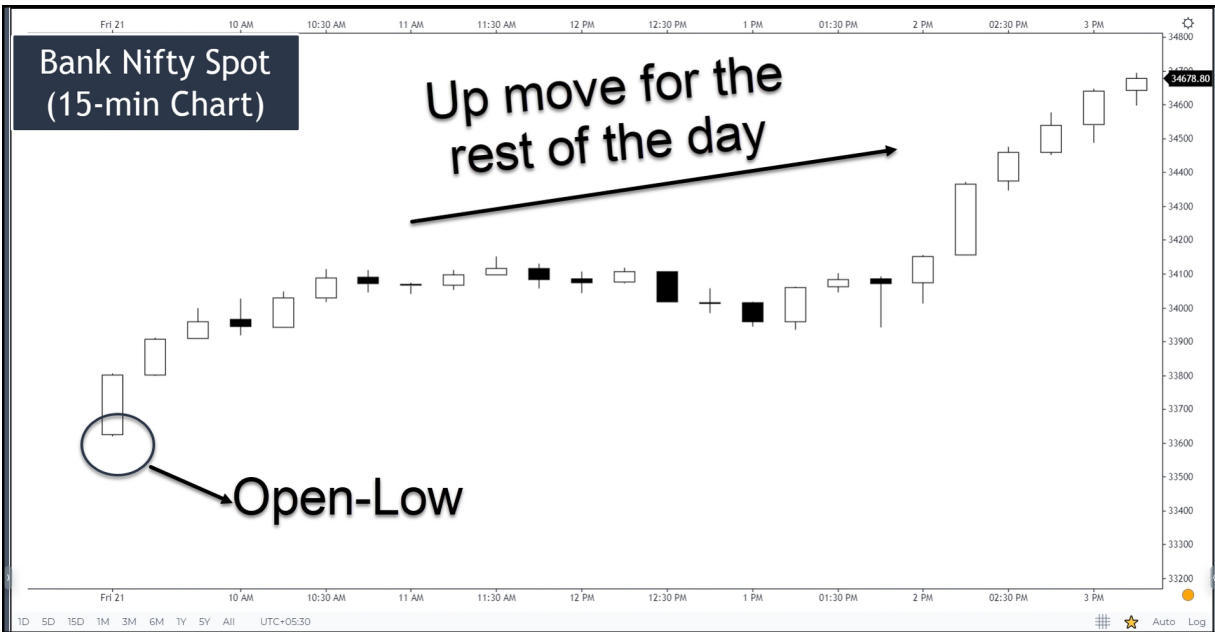

Image 2.2 – Open Low and Rally Upside

The above image shows 15-min chart of Banknifty on 21-May-2021.

The first candle in the 15-min chart shows 'open-low' formation. It means there are no sellers immediately after the open or the presence of strong buyers who are absorbing all the selling pressure, and hence the price maintained open-low status even after 15-minutes.

This is a bullish pattern.

You can see how the price has gone up later and closed near day's high.
