

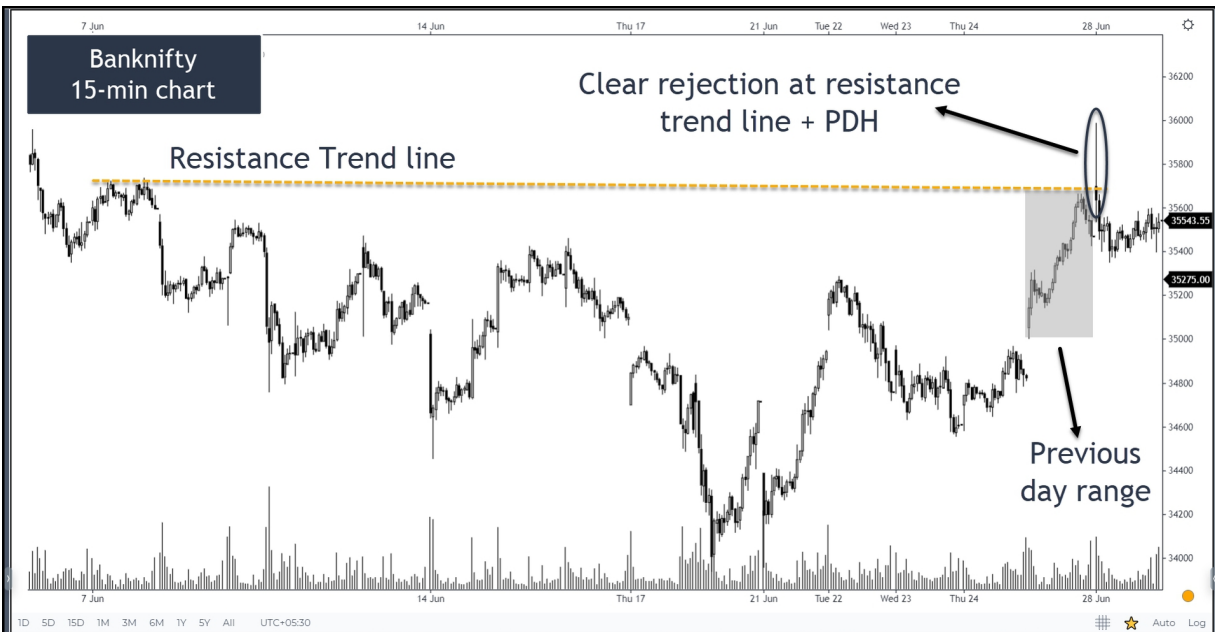

Image 4.21 – Price Rejection in Banknifty

The above image shows 3-weeks of Banknifty chart in the 15-min timeframe. It looks a little compressed as I wanted to indicate the swing high. When the market opened on 28th June, the first candle (in 15-min timeframe) itself showed price rejection through a big selling wick. It indicates the sharp reaction of sellers above the resistance trend line. Hence, there is a higher probability of price to display sideways or down move.
