

However, there is a possibility of a data error or a mistake in the coding, which can change the results slightly.

Besides, I have assumed that if the trading strategy showed profits with the last 10 years of historical data, then there is a high probability of giving earnings in the future.

I advise readers to verify everything on their end before implementing any system.

System 1 – Moving Average & Price Crossover

Moving Average (MA) is the simplest and most popular indicator in the trading community. It can be used in different ways to generate many trading ideas.

MA can be used as both trend-following indicator and a trend-reversal indicator. In this system, we aim to capture contra big moves which often occur at the intraday level.

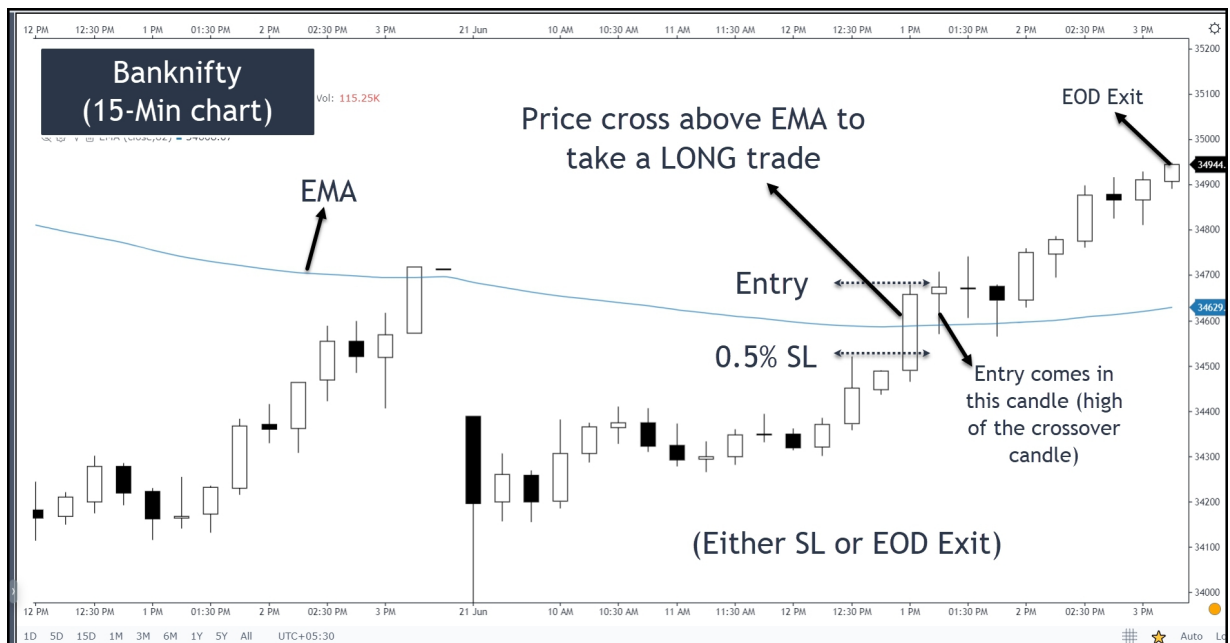

Image 5.1 – EMA & Price Crossover Long Trade

The above image shows EMA & Price crossover for a **Long** trade (the price should cross the EMA from the downside).
