

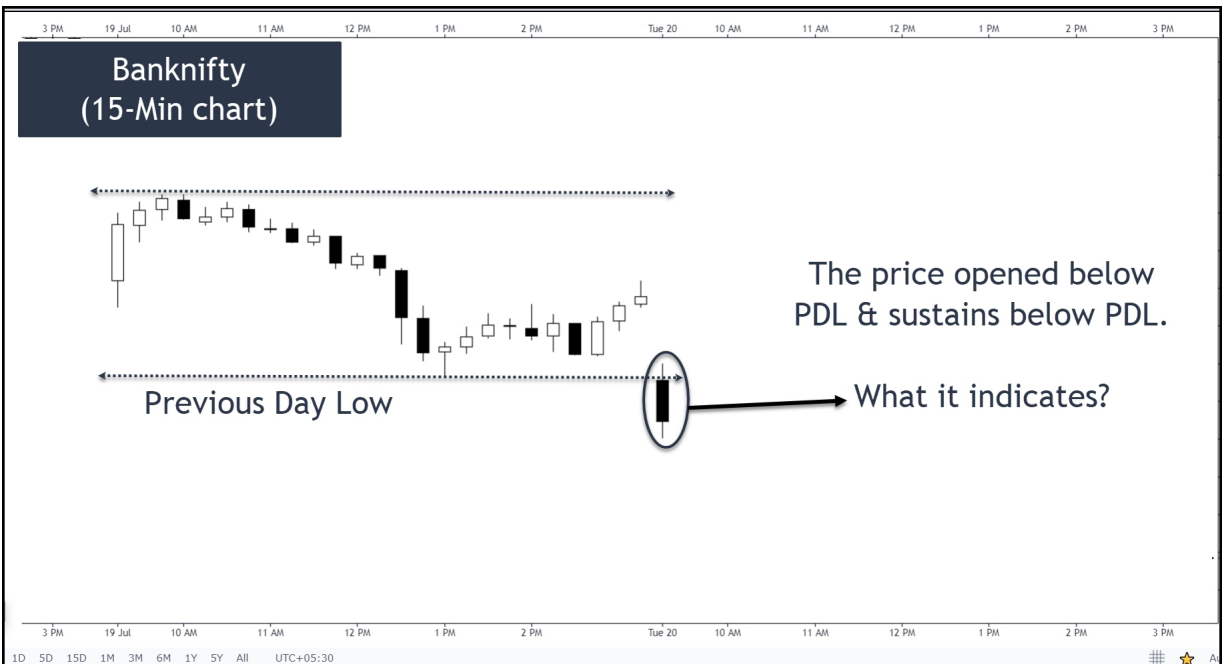

Image 5.9 – Imbalanced Open at PDL

On 20th July, the price opened precisely at the previous day's low (slight gap down from the close), and it sustained below PDL even after 15-minutes from the open.

It indicates some people have vital information, which is not good news for Banknifty, and their participation resulted in an imbalanced open at PDL.

These strong sellers are absorbing all the buying coming at PDL, and hence the price stayed below, even after 15-minutes. Therefore there is a higher probability of price trading downwards for the rest of the day.
