

down for the property was tied up for six months or more, which became
.less viable for many investors

The second problem was that valuers became more conservative, especially when you were trying to pull your money out. For example, if you were to find a house that was worth £150,000 and buy it for £115,000, not only would you have to wait six months to refinance it back up to its true value of £150,000 but when you did, the valuer would come out and say it was only worth £115,000, which is what you paid for it! Many investors would challenge the valuer and show the proof of its true value based on similar sold properties in the street but as far as the valuer was concerned you bought it for £115,000 six months ago so therefore that was its new true
.value

If your strategy is to buy BMV to refinance and pull your money out, the only way this can be done is by adding value to the property. If you converted it into a commercial property, for example, and then proved to the valuer why it was now worth more, you could still potentially pull it off as a
.No Money Down Deal

I will not be going into this because there is much to be considered and when you are relying on builders sticking to budget and valuers being in a
.good mood, it can be very stressful and can go wrong

I like to play it safe myself and especially only like to teach things that are safe because if somebody read this book, took action and lost a lot of
.money I would feel awful

Sometimes investors want BMV properties for other reasons. It may be that they want to buy it cheap and sell it on. If you watch some of the property shows they make it look all so romantic. Buy a cheap run-down house, renovate it and then sell it on to make a small fortune before doing it again. This strategy has its place but in my opinion it is risky and time-consuming
.and we are just not in the right market for this right now

There are new and even simpler ways to buy a property without using any money which I will be teaching later on in this book, but the reason for me
