

After four years you could have saved enough to have paid them back and
.paid their 10 per cent interest and even have some left over

But where would you be financially now? You would be making a passive
income of £8,300 per year. You would have £30,000 equity in the property.
You would have gained any capital appreciation over the four years and
have an appreciating asset until your retirement. All this, and you didn't
.even put a penny in to begin with of your own money

Imagine if you had not just borrowed £30,000 and done this once, but you'd
done this once per year over the four-year period. You would then be
