

KICKING THE WORK HABIT

In our society it's considered normal to work during the best years of our lives. You work when you're young, healthy, and vital. You work when your mental powers are sharp, your mind inquisitive. You work when you still have a family at home and your kids need you the most. You give the best years of your life to a career and the last few years to yourself.

Are we crazy or what?

You don't have to resign yourself to that fate. With my plan you can live the rest of your life without earning another dime. You let your equity sweat for you. And this book tells you how to do it *now*.
