

something you work for; every dollar represents a commensurate amount of toil and sweat. I once knew a man who had his kids haul buckets of stones across the backyard for a home improvement project. He set an amount for each bucket: 10 cents per haul. After several days of this, his kids began to think in terms of “That piece of candy would cost 20 buckets” or “That new video game would take 300 buckets.” Suddenly, money became very labor-defined!

You know you’re doing something right when you start showing up in comic books as a superhero! That’s me using the power of money to save the world!

For tonight, you’re going to illustrate this point with bucks instead of buckets. Before you arrive at the restaurant, stop at a bank machine (you’ll be paying for dinner in cash). Have your child watch you enter your PIN and take out a certain amount of money.
