

employment in the field in 2020. You'll notice that seven of the 10 are lucrative construction and resource-sector jobs. If you think these jobs are just for men, think again. Women can do any one of these jobs; in fact, these sectors need more women. If any of the following jobs pique your interest, I suggest you drill deeper and see what you can find.

1. **Oil and gas drilling supervisor.** *Top 50 rank: #1.* I'd say it's pretty telling that this job beat out all the rest—including doctors, lawyers and bankers, with all their pompous prestige. If you're interested in a managerial position, this could be a great fit: as a supervisor, you'd be managing the personnel and running the equipment on an oil-and-gas job site. This sector has experienced phenomenal growth: *44 percent* over the last six years. The salary has gone up almost as much—39 percent since 2006—and there are expected to be a staggering *2.3 jobs* for every qualified worker in 2020. With rare exceptions, you only need a college diploma, industry training and certificates, and experience to get this job. And the median annual salary is fantastic: \$74,880 in 2012.
2. **Audiologist and speech-language pathologist.** *Top 50 rank: #11.* Speech therapists are in high demand today, in light of the ever-growing numbers of children with autism and speech impediments and the high percentage of seniors suffering from debilitating strokes that damage the language centers in the brain. As a result, this sector has experienced 29 percent growth, and the median salary was \$77,813 in 2012. This job requires a master's degree, however, so be wary of the crushing burden of grad school debt.
3. **Construction manager.** *Top 50 rank: #13.* The construction industry has enjoyed almost as much growth as oil and gas
