

Manual Reporting Challenges

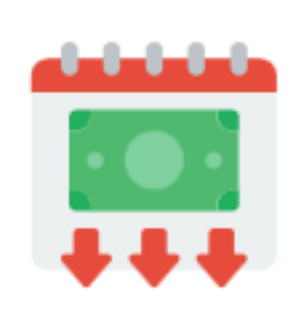

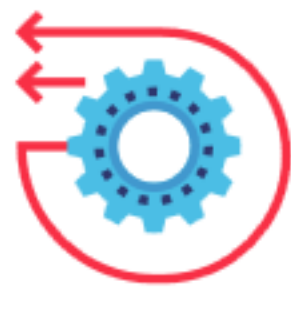

Initially, the process of generating these reports involved:

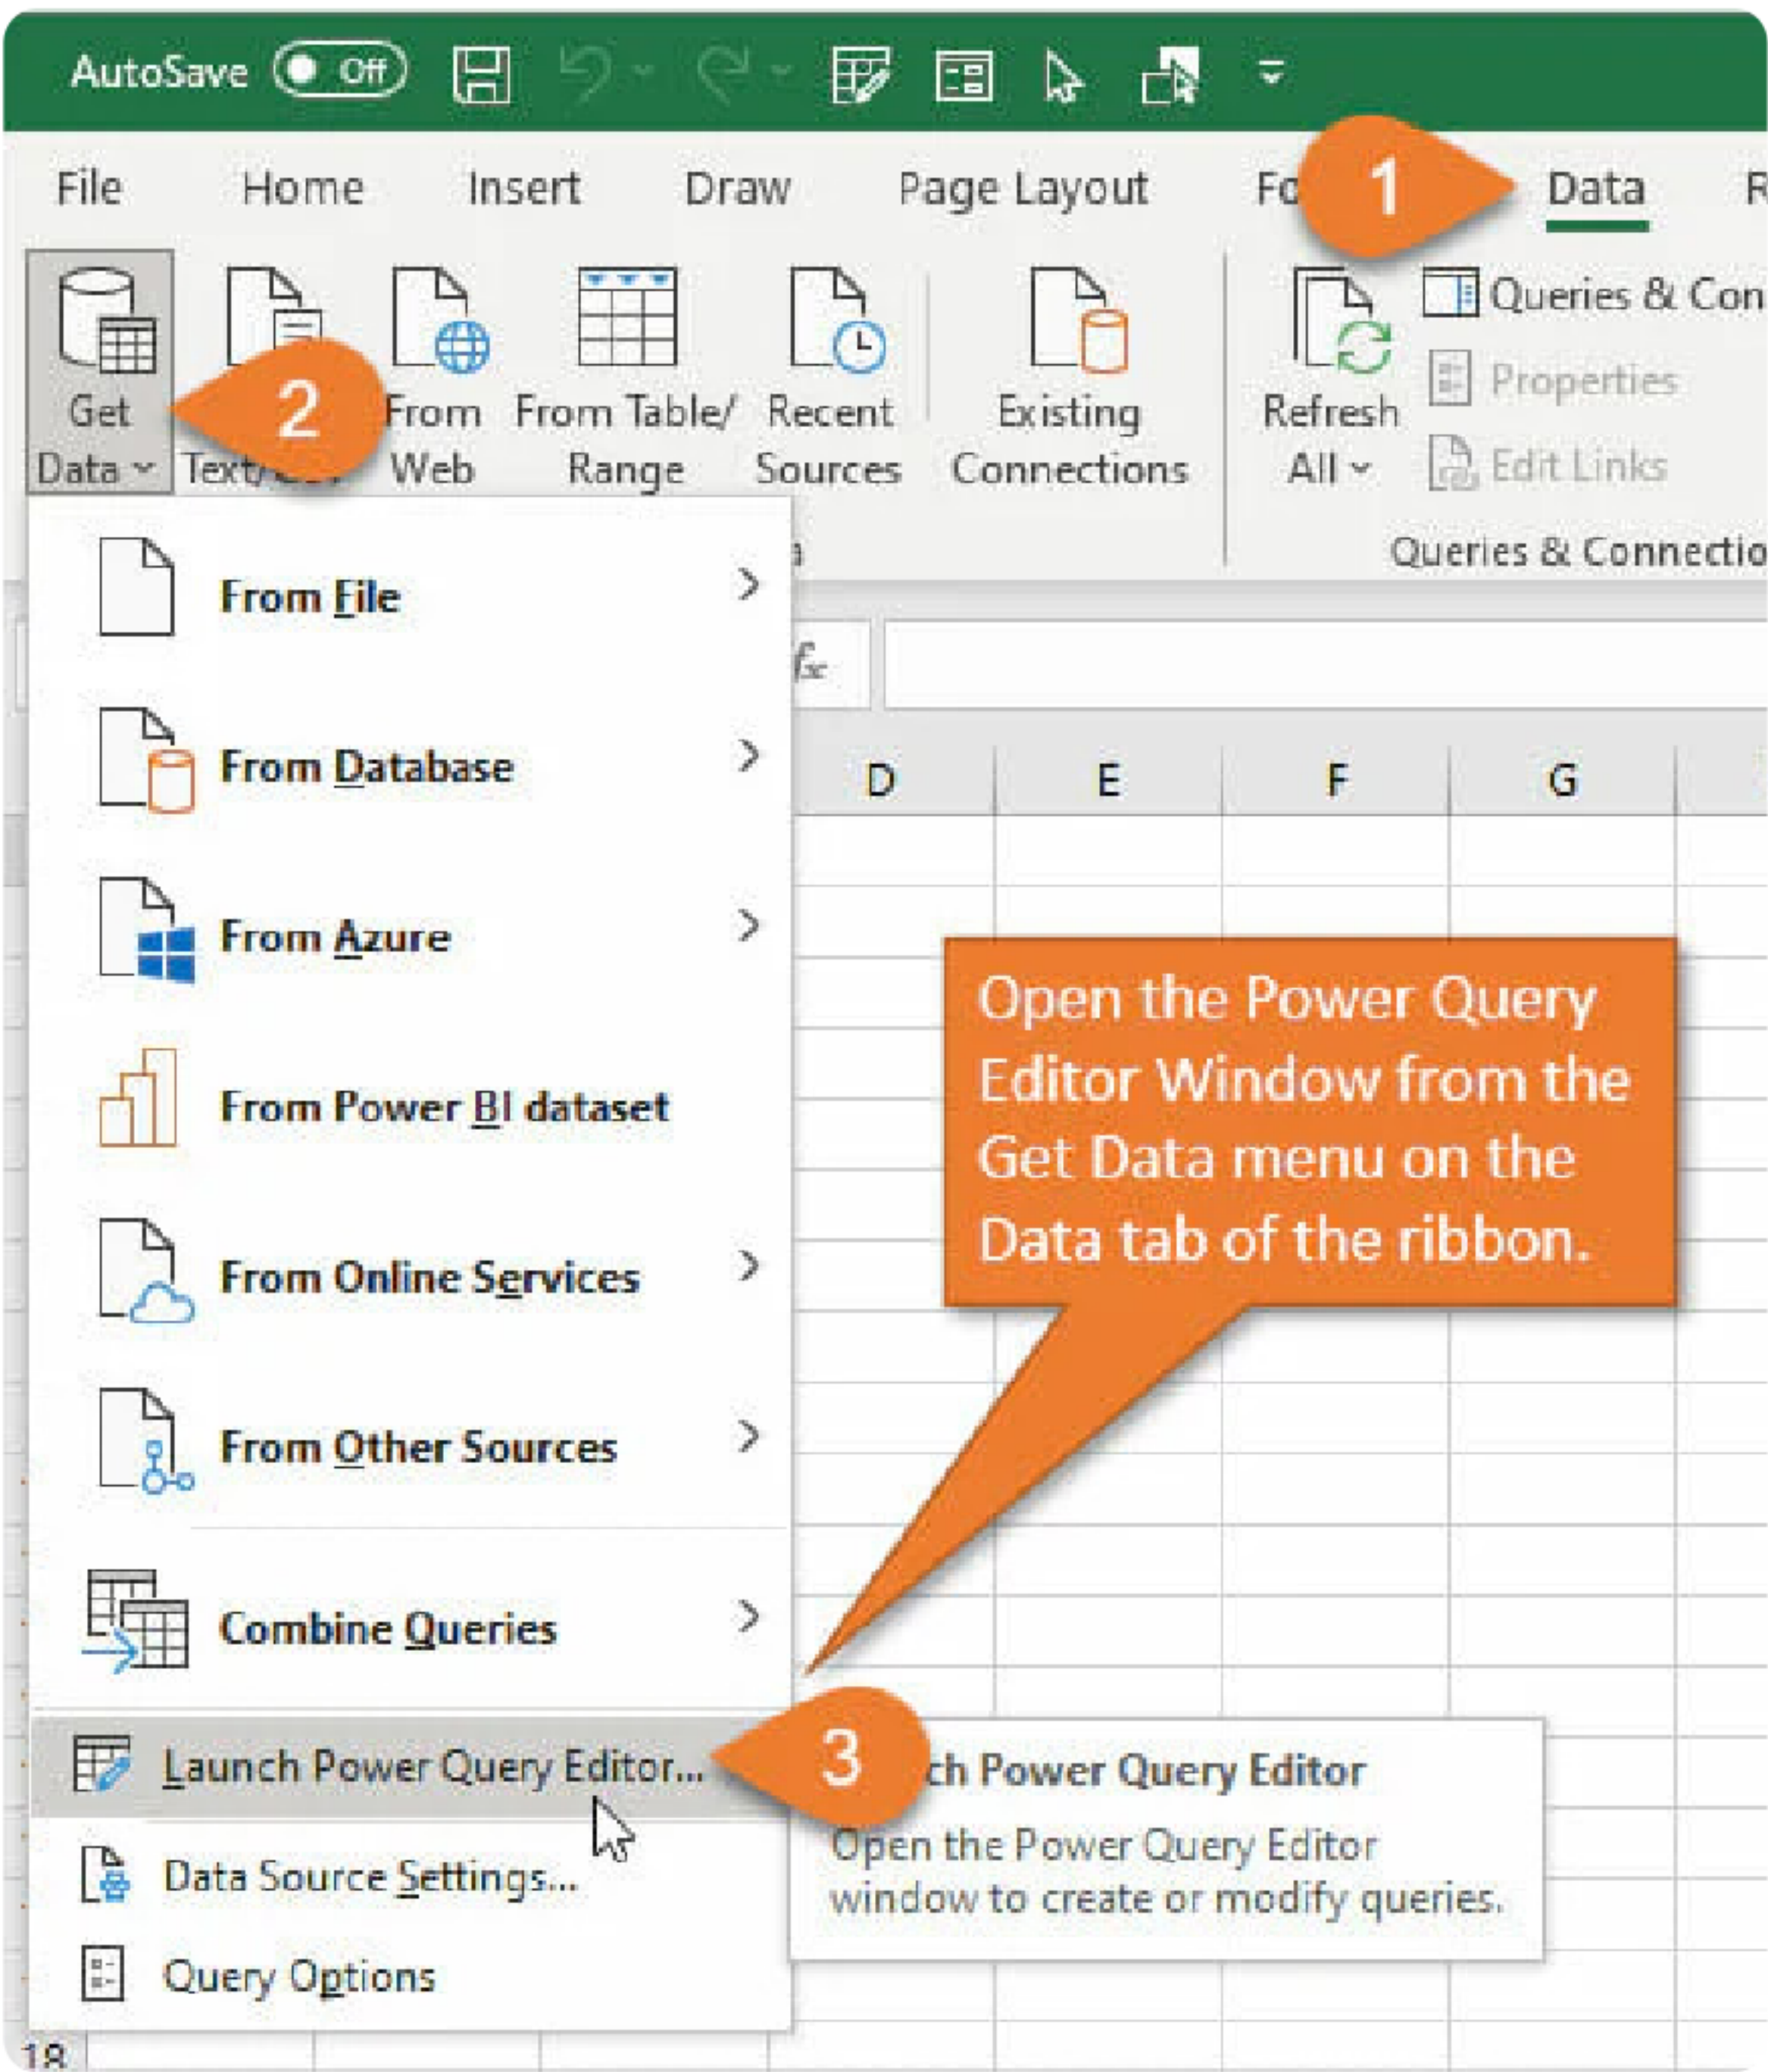

This entire process was highly time-consuming and prone to errors from manual copying/pasting of data across files. It imposed a bottleneck on the overall analysis cycle.

Data Integration and Transformation Automation

To streamline this, consultants may develop an automated data preparation solution using Excel Power Query:

-  Created queries to extract and load data from various source files automatically
-  Applied a series of parsing transformation steps to harmonise data
-  Removed redundancies deduplication and cleansed the data
-  Loaded transformations to a clean data model within the Excel workbook

This automation will eliminate the total reporting effort by ensuring accurate data integration.
