

People (HR) Analytics

People analytics, or workforce or HR analytics, involves using data and analytical techniques to support better human resource decisions and strategies. Applications include:

Employee engagement and retention analysis: Analysing surveys, performance data, and other employee metrics to understand engagement and retention drivers.

Talent acquisition and recruitment optimisation: Using data to streamline hiring processes, identify top talent sources, reduce time-to-hire, etc.

Performance management and development: Providing data-driven insights on employee performance, training needs, career pathing, and succession planning.

Workforce planning and succession strategies: Analysing current workforce skills, demographics, and attrition rates to plan for future needs and manage knowledge transfer.

Diversity, equity, and inclusion (DEI) analytics: Using data to measure and improve workplace diversity, identify potential biases, and promote inclusion.
