

Business Analytics

Business analytics is a broader term encompassing data and analytical techniques across various business areas and functions. This can include:

Sales and marketing analytics: Analysing customer data, market trends, and campaign performance to optimise sales, marketing strategies and ROI.

Pricing and revenue management: Using analytics to set optimal pricing and discounting strategies to maximise revenue yields across different channels/segments.

Product portfolio optimisation: Applying analytical techniques to evaluate the current product mix and identify opportunities for new products or rationalisation.

Strategic planning and decision support: Providing data-driven insights to inform high-level strategic decisions around investments, market entries, etc.

Competitive intelligence and market analysis: Leveraging internal and external data sources to analyse competitors, market shares, disruptions, and M&A opportunities.
