

Robotics and Automation

Implementing advanced robotics and automation solutions has increased productivity, improved precision, and enhanced workplace safety in manufacturing facilities. However, it has also raised concerns about job displacement and the need for workforce reskilling. Context becomes very important as in some countries labor cost is cheaper than machine cost

Globalisation and Supply Chain Complexity

Manufacturing operations have become increasingly globalised, with companies sourcing materials, components, and labour from various locations worldwide. This has led to complex supply chain networks and increased logistics, quality control, and risk mitigation challenges.
