

## For example, Time and Material Engagement for Business Process Optimisation

A large retail company sought to optimise its supply chain and inventory management processes to improve efficiency and reduce costs. Given the complexity and evolving nature of the project, the company engaged a consulting firm under a time and material pricing model.

### Initial Scope and Estimates:

The consulting firm conducted an initial assessment and, based on historical data and expert judgment, provided a high-level estimate of 6 months and ₹8 crore.

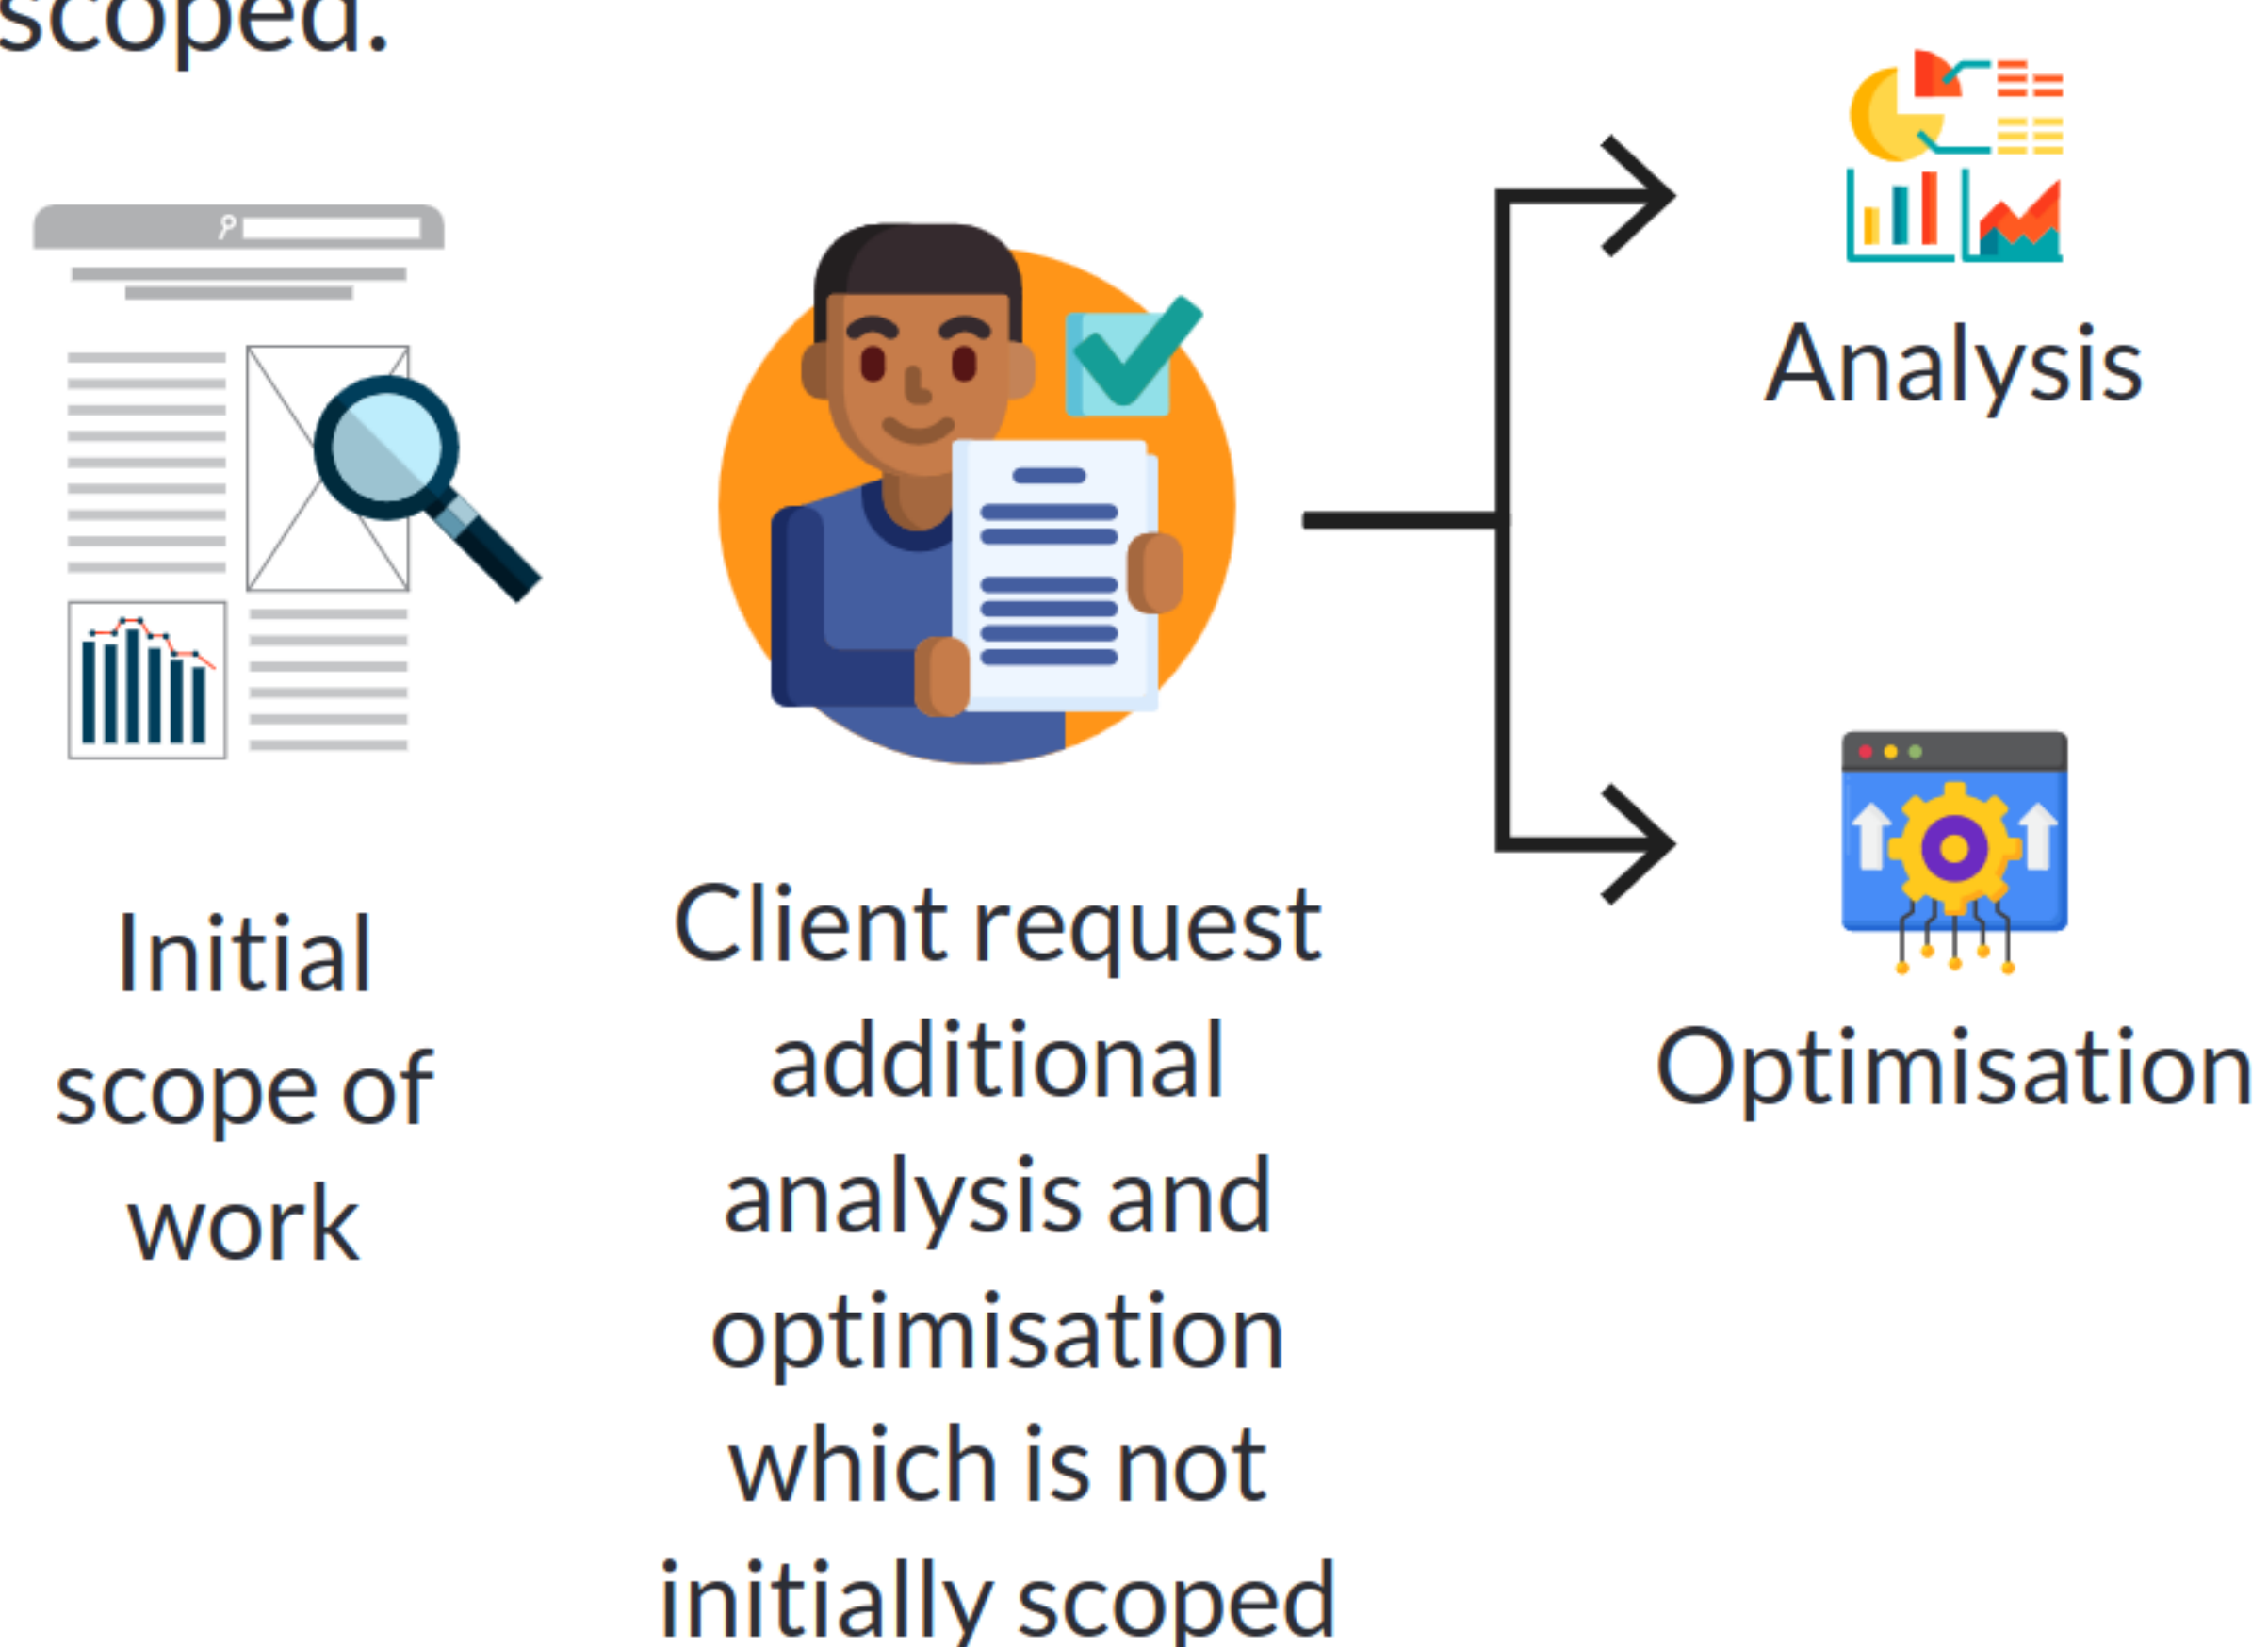

Estimate of 6 months and ₹8 crore

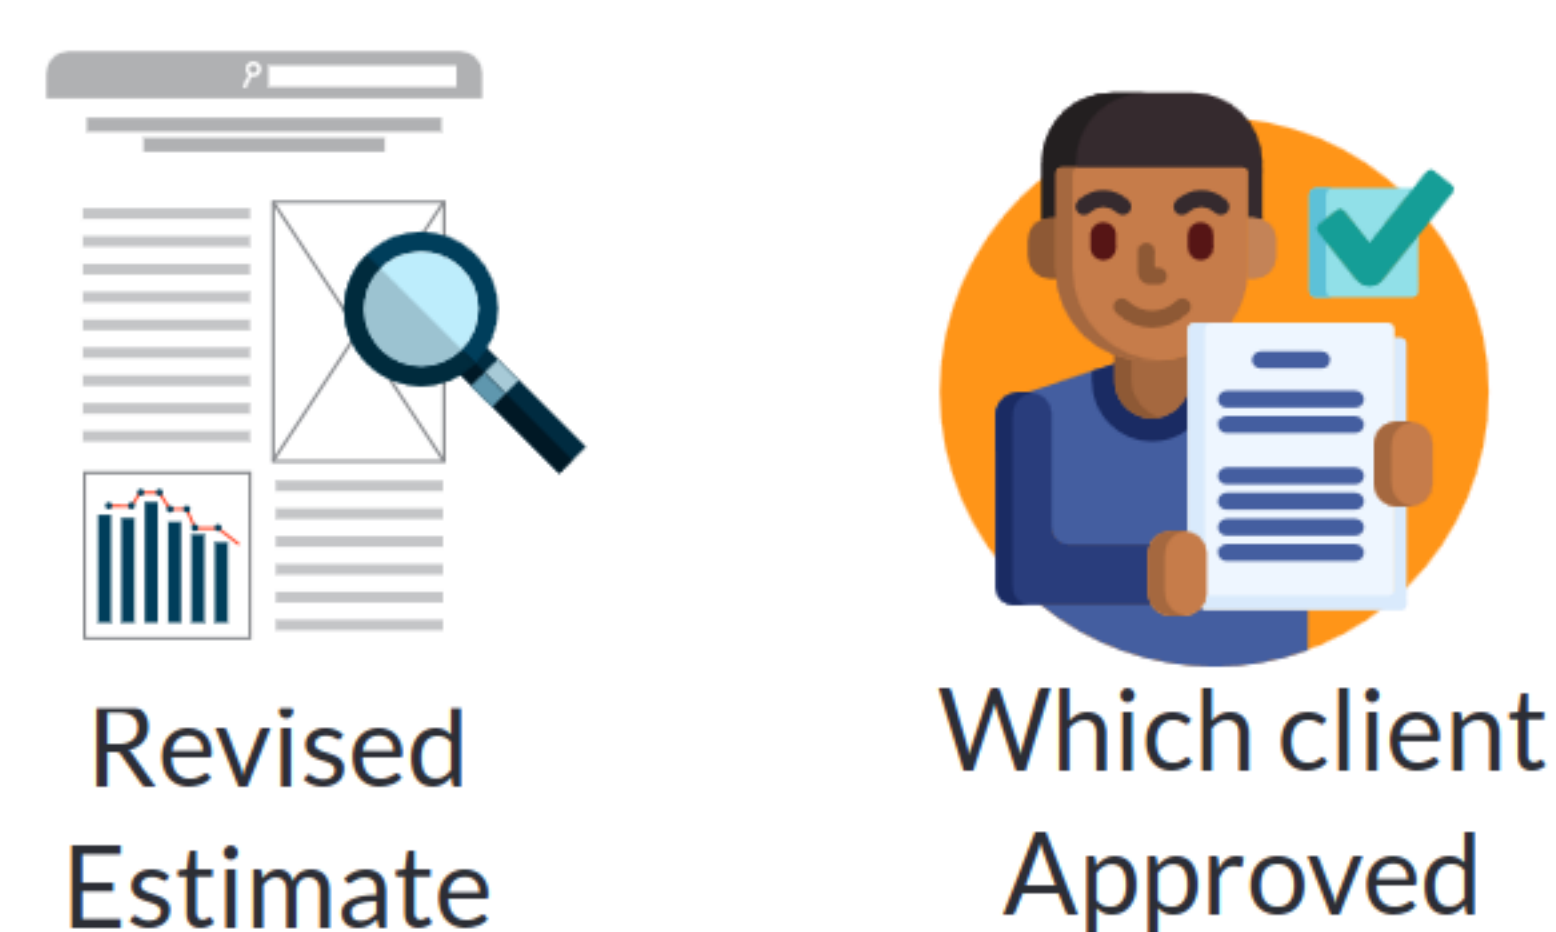

The estimate presents caveats regarding potential scope changes and the need for regular reviews and adjustments.

### Evolving Scope and Adaptability

During the engagement, the client can request additional analysis and optimisation of their warehouse operations, which was not initially scoped.

The consulting firm provided an impact assessment and revised estimate, which the client approved.

Additional resources were allocated, and the project timeline was extended by two months to accommodate the expanded scope.
