

Case Study: Staff Augmentation for Digital Transformation Initiative

A multinational consumer goods company started a large-scale digital transformation initiative but faced resource constraints and skill gaps in certain areas. To address these challenges, the company engaged a consulting firm for staff augmentation services.

Engagement Overview

Project Scope	Staffing Requirements	Engagement Model
Implement a new e-commerce platform, integrate with existing systems, and develop custom applications to enhance digital capabilities. 	Full-stack developers, UI/UX designers, DevOps engineers, project managers, and subject matter experts. 	Hybrid staffing, with on-site and off-site consultants. 

Staffing and Integration Process

- 1

The consulting firm conducted a detailed skill gap analysis and identified the required expertise for the project.
- 2

A dedicated team of consultants was assembled, with a mix of on-site and off-site resources, ensuring the right blend of technical and soft skills.
- 3

Onboarding and knowledge transfer sessions were conducted to align the consultants with the client's processes, tools, and cultural norms.
- 4

Consultants were seamlessly integrated into the client's project teams, collaborating closely with internal stakeholders and subject matter experts.
